Supplies basic summary and treatment information quickly for the health care provider on the front lines. Provides concise supplemental reading material to assist in education of biological casualty management. Edge indexed.

PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment. PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and pararescuemen as well as physicians and physician assistants.

long after you've finished it" (Anna Todd, New York Times bestselling author) from the #1 New York Times bestselling author of *All Your Perfects*, a workaholic with a too-good-to-be-true romance can't stop thinking about her first love. Lily hasn't always had it easy, but that's never stopped her from working hard for the life she wants. She's come a long way from the small town where she grew up—she graduated from college, moved to Boston, and started her own business. And when she feels a spark with a gorgeous neurosurgeon named Ryle Kincaid, everything in Lily's life seems too good to be true. Ryle is assertive, stubborn, maybe even a little arrogant. He's also sensitive, brilliant, and has a total soft spot for Lily. And the way he looks in scrubs certainly doesn't hurt. Lily can't get him out of her head. But Ryle's complete aversion to relationships is disturbing. Even as Lily finds herself becoming the exception to his "no dating" rule, she can't help but wonder what made him that way in the first place. As questions about her new relationship overwhelm her, so do thoughts of Atlas Corrigan—her first love and a link to the past she left behind. He was her kindred spirit, her protector. When Atlas suddenly reappears, everything Lily has built with Ryle is threatened. An honest, evocative, and tender novel, *It Ends with Us* is "a glorious and touching read, a forever keeper. The kind of book that gets handed down" (USA TODAY).

Trauma is the leading cause of death among people under the age of 40 and it ranks third for all age groups. Still, relatively few clinicians specialize in trauma and training is often obtained through experience. The number of trauma patients is expected to continue to grow as pre-hospital care continues to advance. As well, hospitals increasingly see trauma treatment, which requires no pre-approval, as a good source of revenue. Given these developments, the number of opportunities for specialists trained in trauma, including anesthesiologists and critical care physicians, will expand in the years ahead. This book addresses the need for an

Trauma patients present a unique challenge to anesthesiologists, since they require resource-intensive care, often complicated by pre-existing medical conditions. This fully revised new edition focuses on a broad spectrum of traumatic injuries and the procedures anesthesiologists perform to care for trauma patients perioperatively, surgically, and post-operatively. Special emphasis is given to assessment and treatment of co-existing disease, including surgical management of trauma patients with head, spine, orthopaedic, cardiac, and burn injuries. Topics such as training for trauma (including use of simulation) and hypothermia in trauma are also covered. Six brand new chapters address pre-hospital and ED trauma management, imaging in trauma, surgical issues in head trauma and in abdominal trauma, anesthesia for oral and maxillofacial trauma, and prevention of injuries. The text is enhanced with numerous tables and 300 illustrations showcasing techniques of airway management, shock resuscitation, echocardiography and use of ultrasound for the performance of regional anesthesia in trauma.

This book is a comprehensive guide to emergency and trauma care covering the complete process, from pre-hospital care, rapid and point of care assessment, and triaging, to care of the patient during transfer, and in-hospital care. Beginning with a general overview of emergency care and resuscitation, the following sections discuss the treatment of emergencies and trauma in different systems of the body. A complete section is dedicated to paediatric emergencies. The final chapters cover trauma

management, toxicology, disaster management, and environmental emergencies such as thermal and chemical burns, and snake bites. The descriptive text is further enhanced by more than 700 flowcharts, tables, diagrams, clinical photographs, and short notes to assist learning. Key points Comprehensive guide to emergency and trauma care Covers management of emergencies in different systems of the body Includes section on paediatric emergencies Highly illustrated with flowcharts, tables, diagrams, photographs and short notes

Pediatric trauma continues to have a significant impact on the health and well-being of children in the United States. Trauma continues to be the leading cause of death in children 1 to 18 years of age and accounted for more than 14,000 deaths among all children 0 to 18 years of age. In 2008, there were more than 8.6 million nonfatal injuries among newborn to 18-year-olds, with an injury rate of greater than 1 in 10. There is little debate that a coordinated effort and pediatric-specific advances in pediatric trauma systems, prehospital care and hospital care, and injury prevention can have a positive impact on pediatric trauma outcomes in the United States. However, there are still gaps in access to centers that deliver pediatric-focused trauma care, especially in rural areas. Furthermore, there are differing views between different centers regarding the optimal approach to the initial evaluation and management of the pediatric trauma patient. This book is targeted to review critical aspects of the care of the pediatric trauma patient, highlighting the most common and critical injuries encountered in the

Featuring brilliant art, engaging new case studies, and dynamic new teaching and learning resources, this 9th edition of Porth's Pathophysiology: Concepts of Altered Health States is captivating, accessible, and student-friendly while retaining the comprehensive, nursing-focused coverage that has made it a market leader. The book's unique emphasis on "concepts" of altered health states, as opposed to factual descriptions of diseases and disorders, helps students grasp both the physical and psychological aspects of altered health. Drawing on the expertise of new co-author Sheila Grossman, the Ninth Edition maintains its comprehensive depth, while paring down content where appropriate and replacing descriptive content with striking art. (Approximately 600 illustrations are new or have been re-rendered in a consistent modern style.) Also new to this edition are advanced 3D narrated animations that address the most clinically relevant and difficult to understand disorders, engaging unit-opening case studies that reinforce critical thinking and set the tone for the content to come, and a wide range of built-in study tools. Now, for the first time, Porth's Pathophysiology is supported by PrepU, an adaptive learning system that help students learn more, while giving instructors the data they need to monitor each student's progress,

strengths, and weaknesses.

This best-selling resource provides a general overview and basic information for all adult intensive care units. The material is presented in a brief and quick-access format which allows for topic and exam review. It provides enough detailed and specific information to address most all questions and problems that arise in the ICU. Emphasis on fundamental principles in the text should prove useful for patient care outside the ICU as well. New chapters in this edition include hyperthermia and hypothermia syndromes; infection control in the ICU; and severe airflow obstruction. Sections have been reorganized and consolidated when appropriate to reinforce concepts.

Guest editor Lena Napolitano has assembled an expert team of authors on the topic of Trauma in the ICU. Articles will focus on: Non-compressible Torso Hemorrhage; Prediction of Massive Transfusion in Trauma; Coagulopathy of Trauma; Viscoelastic testing and Hyperfibrinolysis in Trauma; Tranexamic Update in Trauma; Optimal Reversal of Novel Anticoagulants in Trauma; Optimal Transfusion for Traumatic Hemorrhagic Shock; and more

Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic

procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma (and especially spinal trauma) and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision making, programs of trauma education, or organization of a trauma center.
