The theory and practice of management accounting should be seen within the context of varieties of global capitalism, to appreciate its role as a 'calculative technology of capitalism' which is practiced on factory floors, corporate boards, computer networks, spreadsheets, and so forth. This new textbook is the first to introduce the field from a rounded social science perspective. Strategizing Management Accounting offers a theoretical discussion on management accounting's strategic orientation by accommodating two interrelated lines of analyses, from historical and contemporary perspectives. The book illustrates how 'new management accounting' has evolved into the form in which it exists today in its neoliberal context and how those new management accounting practices have become manifestos for the managers, as calculative technologies of decision making, performance management, control, corporate governance, as well as global governance, and development within various forms of organizations across the globe. Each chapter draws on Foucauldian analysis of biopolitics explaining how neoliberal market logic informs a set of strategies and mechanisms through which various social entities and discourses are made governable by considering them as biopolitical entities of global governance. Written by two recognized accounting experts, this book is vital reading for all students of management accounting and will also be a useful supplementary resource for those wanting to understand and research accounting's vital role in contemporary society.

The study of the interactions between business organizations and their natural environments has gained momentum recently under the aegis of social and environmental accounting and reporting (SEAR), and as a diluted form of response in corporate social responsibility (CSR). Environmental Accounting, Sustainability and Accountability envisages accounting as an effective instrument in improving this interrelationship. It comprehensively describes how organizations can capture their environmental performance and thereby address societal concerns. The book closely explores how organizations can embed care for the environment as fundamental to their functioning. It broadly covers traditional accounting as a measuring instrument, contemporary advances and unresolved problems, alternative perspectives and recent developments. The central idea proposed here is to evolve the environmental accounting framework and bring calculative aspects into sustainability thinking that businesses are responsible for. Among the other important innovative ideas discussed are new costing techniques for waste management, accounting schematics of carbon trade, green information needs of management and the extension of the environmental viewpoint to information systems and technology.
