Schools are drowning in test data, but many schools do little with test results other than sort students into various categories of proficiency or lack thereof. Some educators feel testing has taken the joy out of teaching. Others believe valuable instructional time has been lost as a result of testing. Yet, NCBL and other federal and state mandates have placed educators under increasing pressure to make certain all students meet standards on high-stakes tests. Now, more than ever, teachers and administrators need to embrace testing as a valuable classroom tool to guide instruction, use efficient technological resources available for test scoring and analysis, and profit from the benefits of test analysis to increase learning and achievement. *Using Test Data for Student Achievement* shows educators, step by step, how to use test data to facilitate student learning. The book combines research, technology and Sindelar's experience as a teacher and administrator to provide practical and efficient ways

Each review includes test-taking strategies and practice questions with detailed answer explanations. The final part of this eBook comprises two full-length tests so that you can apply your knowledge and newly learned strategies and practice for the actual GED. Finally, a word list in the appendix offers you a great tool to boost your vocabulary.

Preparing students to be active, informed, literate citizens is one of the primary functions of public schools. But how can students become engaged citizens if they can't read, let alone understand, their social studies texts? What can educators--and social studies teachers in particular--do to help students develop the knowledge, skills, and motivation to become engaged in civic life? Building Literacy in Social Studies addresses this question by presenting both the underlying concepts and the research-based techniques that

teachers can use to engage students and build the skills they need to become successful readers, critical thinkers, and active citizens. The authors provide targeted strategies--including teaching models, graphic organizers, and step-by-step instructions--for activities such as * Building vocabulary, * Developing textbook literacy skills, * Interpreting primary and secondary sources, * Applying critical thinking skills to newspapers and magazines, and * Evaluating Internet sources. Readers will also learn how to organize classrooms into models of democracy by creating learning communities that support literacy instruction, distribute authority, encourage cooperation, and increase accountability among students. Realistic scenarios depict a typical social studies teacher's experience before and after implementing the strategies in the classroom, showing their potential to make a significant difference in how students respond to instruction. By making literacy strategies a vital part of content-area instruction, teachers not only help students better understand their schoolwork but also open students' eyes to the power that informed and engaged people have to change the world.

Meta-analysis is a powerful statistical methodology for synthesizing research evidence across independent studies. This is the first comprehensive handbook of meta-analysis written specifically for ecologists and evolutionary biologists, and it provides an invaluable introduction for beginners as well as an up-to-date guide for experienced meta-analysts. The chapters, written by renowned experts, walk readers through every step of meta-analysis, from problem formulation to the presentation of the results. The handbook identifies both the advantages of using meta-analysis for research synthesis and the potential pitfalls and limitations of meta-analysis (including when it should not be used). Different approaches to carrying out a meta-analysis are

Walks you through every step of carrying out a meta-analysis in ecology and evolutionary biology, from problem formulation to result presentation Brings together experts from a broad range of fields Shows how to avoid, minimize, or resolve pitfalls such as missing data, publication bias, varying data quality, nonindependence of observations, and phylogenetic dependencies among species Helps you choose the right software Draws on numerous examples based on real biological datasets

This book introduces and the new computer-based research methods for studying and modeling complex social phenomena. It is the first coherent collection that surveys the impact that computer-based methods have had on the social and behavioural sciences and illustrates the potential for future research. The methods are presented in an accessible manner and do not assume any background in computer science. The authors introduce each chapter and explain how computers can help to study social processes and each method is described in relation to a substantive issue to show how it can contribute to our understanding of complex problems. The themes covered include computer simulation, neural and social networks and the visualization of complex network data.

Instructors can also use the extension and focus activities as class activities. • Brand new companion website expands on chapter content and provides resources for further study (www.routledge.com/cw/Turner).

To better identify and assist struggling students and avoid unnecessary placement into special education services, the service delivery model response to intervention (RTI) is used with the general education population. Even though RTI has been studied in elementary schools for many years, further research on its use at the secondary academic level is scarce. *Advanced Strategies and Models for Integrating RTI in Secondary Schools* provides emerging research exploring the advanced theoretical and practical aspects of the use of RTI to assist teachers in providing research-based instructional strategies to students who are failing their academic subjects. Featuring coverage on a broad range of topics such as behavioral response, progress monitoring, and career readiness, this book is ideally designed for

Measuring History complements the cases presented in *Wise Social Studies Practices* (Yeager & Davis, 2005). Yeager and Davis highlight the rich and ambitious teaching that can occur in the broad context of state-level testing. In this book, the chapter authors and I bring the particular state history tests more to the fore and examine how teachers are responding to them. At the heart of *Measuring History* are cases of classroom teachers in seven states (Florida, Kentucky, Michigan, New York, Texas, Mississippi, and Virginia) where new social studies standards and new, and generally high-stakes, state-level history tests are prominent. In these chapters, the authors describe and analyze the state's testing efforts and how those efforts are being interpreted in the context of classroom practice. The results both support and challenge prevailing views on the efficacy of testing as a vehicle for educational reform. Catherine Horn (University of Houston) and I lay the groundwork for the case studies through a set of introductory chapters that examine the current environment, the research literature, and the technical qualities of history tests.

The use of case studies to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study

Like the schools in which it is taught, social studies is full of alluring contradictions. It harbors possibilities for inquiry and social criticism, liberation and emancipation. Social studies could be a site that enables young people to analyze and understand social issues in a holistic way – finding and tracing relations and interconnections both present and past in an effort to build meaningful understandings of a problem, its context and history; to envision a future where specific social problems are resolved; and take action to bring that vision in to existence. Social studies could be a place where students learn to speak for themselves in order to achieve, or at least strive toward an equal degree of participation and better future. Social studies could be like this, but it is not. Rethinking Social Studies examines why social studies has been and continues to be profoundly conversing in nature, the engine room of

illusion factories whose primary aim is reproduction of the existing social order, where the ruling ideas exist to be memorized, regurgitated, internalized and lived by. Rethinking social studies as a site where students can develop personally meaningful understandings of the world and recognize they have agency to act on the world, and make change, rests on the premises that social studies should not show life to students, but bringing them to life and that the aim of social studies is getting students to speak for themselves, to understand people make their own history even if they make it in already existing circumstances. These principles are the foundation for a new social studies, one that is not driven by standardized curriculum or examinations, but by the perceived needs, interests, desires of students, communities of shared interest, and ourselves as educators. Rethinking Social Studies challenges readers to reconsider conventional thought and practices that sustain the status quo in classrooms, schools, and society by critically engaging with questions and issues such as: neutrality in the classroom; how movement conservatism shapes the social studies curriculum; how corporate-driven education affects schools, teachers, and curriculum; ways in which teachers can creatively disrupt everyday life in the social studies classroom; going beyond language and inclusive content in social justice oriented teaching; making critical pedagogy relevant to everyday life and classroom practice; the invisibility of class in the social studies curriculum and how to make it a central organizing concept; class war, class consciousness and social studies in the age of
