

Ethiopian National Drug Formulary Who

This is a study of the nature of corruption in Ethiopia. It maps eight key sectors. The diagnostics strongly suggest that, in Ethiopia, corrupt practice in the delivery of basic services is potentially much lower than other low-income countries, but that there are emerging patterns in sector level corruption.

This book is a contribution to the global history of the transfer of political ideas, as exemplified by the case of modern Ethiopia. Like many non-European nation-states, Ethiopia adopted a western model of statehood, that is, the nation-state. Unlike the postcolonial polities that have retained the mode of statehood imposed on them by their colonial powers, Ethiopia was never successfully colonized leaving its ruling elite free to select a model of 'modern' (western) statehood. In 1931, via Japan, they adopted the model of unitary, ethnolinguistically homogenous nation-state, in turn copied by Tokyo in 1889 from the German Empire (founded in 1871). Following the Ethiopian Revolution (1974) that overthrew the imperial system, the new revolutionary elite promised to address the 'nationality question' through the marxist-leninist model. The Soviet model of ethnolinguistic federalism (originally derived from Austria-Hungary) was introduced in Ethiopia, first in 1992 and officially with the 1995 Constitution. To this day the politics of modern Ethiopia is marked by the tension between these two opposed models of the essentially central European type of statehood. The late 19th-century 'German-German' quarrel on the 'proper' model of national statehood for Germany – or more broadly, modern central Europe – remains the quarrel of Ethiopian politics nowadays. The book will be useful for scholars of Ethiopian and African history and politics, and also offers a case in comparative studies on the subject of different models of national statehood elsewhere.

This book is open access under a CC-BY license. The importance of the pharmaceutical industry in Sub-Saharan Africa, its claim to policy priority, is rooted in the vast unmet health needs of the sub-continent. Making Medicines in Africa is a collective endeavour, by a group of contributors with a strong African and more broadly Southern presence, to find ways to link technological development, investment and industrial growth in pharmaceuticals to improve access to essential good quality medicines, as part of moving towards universal access to competent health care in Africa. The authors aim to shift the emphasis in international debate and initiatives towards sustained Africa-based and African-led initiatives to tackle this huge challenge. Without the technological, industrial, intellectual, organisational and research-related capabilities associated with competent pharmaceutical production, and without policies that pull the industrial sectors towards serving local health needs, the African sub-continent cannot generate the resources to tackle its populations' needs and demands. Research for this book has been selected as one of the 20 best examples of the impact of UK research on development. See <http://www.ukcds.org.uk/the-global-impact-of-uk-research> for further details.

The new "2010 Red Book" contains extensive updates and additions and provides the latest pricing and product information on more than 100,000 prescription and OTC items.

The world is living dangerously - either because it has little choice or because it is making the wrong choices -- Dr Gro Harlem Brundtland WHO Director-General

Managing Drug Supply (MDS) is the leading reference on how to manage essential medicines in developing countries. MDS was originally published in 1982; it was revised in 1997 with over 10,000 copies distributed in over 60 countries worldwide. The third edition, MDS-3: Managing Access to Medicines and Health Technologies reflects the dramatic changes in politics and public health priorities, advances in science and medicine, greater focus on health care systems, increased donor funding, and the advent of information technology that have profoundly affected access to essential medicines over the past 14 years. Nearly 100 experts from a wide range of disciplines and virtually every corner of the world have contributed to this third edition. In addition to many new country studies, references, and extensive revisions, MDS-3 offers new chapters on areas such as pharmaceutical benefits in insurance programs, pricing, intellectual property, drug seller initiatives, and traditional and complementary medicine. The revisions and new chapters echo the wide variety of issues that are important to health practitioners and policy makers today. MDS-3 will be a valuable tool in the effort to ensure universal access to quality medicines and health technologies and their appropriate use.

Ethiopian National Drug Formulary Ethiopian Reproductive, Maternal, Newborn and Child Health (RMNCH) Medicines Formulary GRIN Verlag

Optimizing outcomes for women in labor at the global level requires evidence-based guidance of health workers to improve care through appropriate patient selection and use of effective interventions. In this regard, the World Health Organization (WHO) published recommendations for induction of labor in 2011. The goal of the present guideline is to consolidate the guidance for effective interventions that are needed to reduce the global burden of prolonged labor and its consequences. The primary target audience includes health professionals responsible for developing national and local health protocols and policies, as well as obstetricians, midwives, nurses, general medical practitioners, managers of maternal and child health programs, and public health policy-makers in all settings.

"Resolution WHA41.17 adopted by the Forty-first World Health Assembly, 13 May 1988" -- p.1.

"A 22-volume, highly illustrated, A-Z general encyclopedia for all ages, featuring sections on how to use World Book, other research aids, pronunciation key, a student guide to better writing, speaking, and research skills, and comprehensive index"--

Document from the year 2016 in the subject Medicine - Pharmacology, , language: English, abstract: To provide basic information on the management and appropriate prescribing, dispensing and use of RMNCH medicines will familiarize with the terminologies used in drug management, the medicines used, including their generic names, uses, doses, precautions, side effects, storage and handling, advising/counselling patients. It thereby addresses the scope of knowledge which will fill those information gaps on how best use RMNCH medicines by healthcare providers and clients. The formulary apart from being used as desk reference by Health care providers can also be used as a resource material during the basic training of Health care providers who specifically deal with RMNCH services.

As a low-income country, Ethiopia has made impressive progress in improving health outcomes. This report examines how Ethiopia's Health Extension Program (HEP) has contributed to the country's move toward Universal Health Coverage (UHC), and to shed light on how other countries may learn from Ethiopia's experiences of HEP when designing their own path to UHC. HEP is one of the government's UHC strategies introduced in a context of limited resources and low coverage of essential health services. The key aspects of the program include the capacity building and mobilization of more than 30, 000 Health Extension Workers (HEWs) targeting more than 12 million model families, and the mobilization of health development army ? to support the community-based health system. Using the HEP-UHC conceptual model and data from Demographic and

Health Surveys, the study examines how the HEP has contributed to the country's move toward UHC. During the period that the HEP has been implemented, the country has experienced significant improvements in many dimensions: in terms of socioeconomic, psychological, behavioral, and biological dimensions of the beneficiaries; and in terms of the coverage of health care services. The study finds an accelerated rate of improvements among the rural, less-educated, and the poor population, which is leading to an overall reduction in equity gaps and improvements in the equity indicators including the concentration indices - that suggest a more equitable distribution of resources and health outcomes. The HEP in Ethiopia has demonstrated that an institutionalized community approach is effective in helping a country make progress toward UHC. The elements of success in the HEP include the emphasis on community mobilization which identifies community priorities, engages and empowers community members, and supports their ability to solve local problems. The other aspect of HEP is the emphasis on institutionalization of the activities, which addresses the sustainability of community programs through high level of political commitment, and effective coordination of national policies and leveraging of support from partners. These findings may offer useful lessons for other low income countries facing similar challenges in developing and implementing a sustainable UHC strategy.

Malaria is an infectious disease like no other: it is a dynamic force of nature and Africa's most deadly and debilitating malady. James C. McCann tells the story of malaria in human, narrative terms and explains the history and ecology of the disease through the science of landscape change. All malaria is local. Instead of examining the disease at global or continental scale, McCann investigates malaria's adaptation and persistence in a single region, Ethiopia, over time and at several contrasting sites. Malaria has evolved along with humankind and has adapted to even modern-day technological efforts to eradicate it or to control its movement. Insecticides, such as DDT, drug prophylaxis, development of experimental vaccines, and even molecular-level genetic manipulation have proven to be only temporary fixes. The failure of each stand-alone solution suggests the necessity of a comprehensive ecological understanding of malaria, its transmission, and its persistence, one that accepts its complexity and its local dynamism as fundamental features. The story of this disease in Ethiopia includes heroes, heroines, witches, spirits — and a very clever insect — as well as the efforts of scientists in entomology, agroecology, parasitology, and epidemiology. Ethiopia is an ideal case for studying the historical human culture of illness, the dynamism of nature's disease ecology, and its complexity within malaria.

Museums throughout the world face the challenge of finding nontoxic methods to control insect pests. This book focuses on practical rather than theoretical issues in the use of oxygen-free environments, presenting a detailed, hands-on guide to the use of oxygen-free environments in the eradication of museum insect pests.

This report is structured in five parts: national framework for traditional and complementary medicine (T&CM); product regulation; practices and practitioners; the challenges faced by countries; and, finally, the country profiles. Apart from the section on practices and practitioners, the report is consistent with the format of the report of the first global survey in order to provide a useful comparison. The section on practices and practitioners, which covers providers, education and health insurance, is a new section incorporated to reflect the emerging trends in T&CM and to gather new information regarding these topics at a national level. All new information received has been incorporated into individual country profiles and data graphs. The report captures the three phases of progress made by Member States; that is, before and after the first WHO Traditional Medicine Strategy (1999-2005), from the first global survey to the second global survey (2005-2012) and from the second survey to the most recent timeline (2012-2018).

This report presents the recommendations of the WHO Expert Committee responsible for updating the WHO Model List of Essential Medicines. The first part contains a progress report on the new procedures for updating the Model List and the development of the WHO Essential Medicines Library. It continues with a section on changes made in revising the Model List followed by a review of some sections such as hypertensive medicines and fast track procedures for deleting items. Annexes include the 13th version of the Model List and items on the list sorted according to their 5-level Anatomical Therapeutic Chemical classification codes.

Since its first publication in 2002, the WHO Model Formulary has become an indispensable source of independent information on essential medicines for pharmaceutical policy-makers and prescribers worldwide. The Model Formulary is the authoritative guide on how to make effective use of the medicines on the WHO Model List of Essential Medicines, so improving patient safety, and limiting unnecessary medical spending. For each medicine the Model Formulary provides information on use, dosage, adverse effects, contraindications and warnings, supplemented by guidance on selecting the right medicine for a range of conditions. The new edition, WHO Model Formulary 2008, details changes made to the WHO Model List of Essential Medicines in 2007, with updated therapeutic information on existing medicines reflecting new clinical knowledge.

From a war-torn and famine-plagued country at the beginning of the 1990s, Ethiopia is today emerging as one of the fastest-growing economies in Africa. Growth in Ethiopia has surpassed that of every other sub-Saharan country over the past decade and is forecast by the International Monetary Fund to exceed 8 percent over the next two years. The government has set its eyes on transforming the country into a middle-income country by 2025, and into a leading manufacturing hub in Africa. The Oxford Handbook of the Ethiopian Economy studies this country's unique model of development, where the state plays a central role, and where a successful industrialization drive has challenged the long-held erroneous assumption that industrial policy will never work in poor African countries. While much of the volume is focused on post-1991 economic development policy and strategy, the analysis is set against the background of the long history of Ethiopia, and more specifically on the Imperial period that ended in 1974, the socialist development experiment of the Derg regime between 1974 and 1991, and the policies and strategies of the current EPRDF government that assumed power in 1991. Including a range of contributions from both academic and professional standpoints, this volume is a key reference work on the economy of Ethiopia.

This book, in two volumes, contains an annotated English translation of the *História da Etiópia* by the Spanish Jesuit missionary priest Pedro Páez (Pêro Pais in Portuguese), 1564-1622, who worked in the Portuguese padroado missions, first in India and then in Ethiopia, long thought to be the kingdom of the legendary Prester John. His history of Ethiopia was written in Portuguese in the last ten years of his life and survives in only two manuscripts. The translation, by Christopher J. Tribe, is based on the new critical edition of the Portuguese text by Isabel Boavida, Hervé Pennec and Manuel João Ramos, which was published in Lisbon in 2008. They are also the editors of this English version. The History of Ethiopia is an essential source for several areas of study - from the history of the Catholic missions in that country and the relations between the European religious orders, to the history of art and religions; from the history of geographical exploration to the ideological contextualization of the Ethiopian kingdom; from material culture to Abyssinian political and territorial administration; and from an analysis of local circumstances to changes in human ecology in the Horn of Africa and the Indian Ocean. It is a repository of empirical knowledge on the political geography, religion, customs, flora and fauna of Ethiopia. It combines travel narrative with a historico-ethnographic monograph, and is a chronicle of the activities of Jesuit missionaries in their Ethiopian mission. It also reworks a wide variety of documents, including the first translations into a European language of a number of Ethiopian literary texts, from royal chronicles to hagiographies. It complements other early accounts of Ethiopia by Ludovico de Varthema, Francisco Alvares, Castanhoso, Bermudez, Arnold von Harff, Manoel de Almeida, Bahrey, Alessandro Zorzi, Jerónimo Lobo and Václav Prutky, all published by The Hakluyt Society.

This book provides an overview of the global pharmaceutical pricing policies. Medicines use is increasing globally with the increase in resistant microbes, emergence of new treatments, and because of awareness among consumers. This has resulted in increased drug expenditures globally. As the pharmaceutical market is expanding, a variety of pharmaceutical pricing strategies and policies have been employed by drug companies, state organizations and pharmaceutical pricing authorities.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

A lively and stimulating resource for all first year students of human geography, this introductory Reader comprises key published writings from the main fields of human geography. Because the subject is both broad and necessarily only loosely defined, a principal aim of this book is to present a view of the subject which is theoretically informed and yet recognises that any view is partial, contingent and subject to change. The extracts selected are accessible and raise issues of method and theory as well as fact. The editors have chosen articles that not only represent main currents in the present flow of academic geography but which are also responsive to developments outside of the discipline. Their selection contains a mixture of established and recent writings and each section features a contextualizing introduction and detailed suggestions for further reading.

This is the tenth edition of the authoritative API Textbook of Medicine, completely revised, updated and expanded, with 28 brand new chapters. The textbook is comprised of two volumes, divided into 29 sections. Beginning with an introduction to the practice of medicine, and a disease profile and epidemiology of communicable and non-communicable diseases, each subsequent section covers a separate medical specialty. The second section on 'Clinical Approach to Key Manifestation' has been expanded with six new chapters, including the appropriate selection of imaging modalities. Other new topics in this edition include advanced cardiac life support system, life-style changes in the management of diabetes, diabetes in the elderly, prevention of cardiovascular disease, acute and chronic pancreatitis, and tumours of the liver. Chapters on chronic and sleep-related pulmonary disorders have been completely re-written to highlight their increased prevalence, and a new chapter on pulmonary rehabilitation has been added. An entirely new section on the 'Future of Medicine' including regenerative medicine, nanotechnology and nanomedicine, robotic surgery, and an introduction to 'space medicine', brings the API Textbook of Medicine to its conclusion. With 1090 full colour images and illustrations, spanning over 3000 pages, this all-encompassing textbook is a comprehensive guide to the practice of medicine, brought fully up-to-date for physicians, surgeons and post-graduate medical students. Key Points New edition of this comprehensive, two volume textbook Fully revised, updated and expanded with 28 new chapters New section on the future of medicine 1090 full colour images and illustrations Previous edition published 2012

A drug policy is a crucial ingredient in every country's national health strategy as it provides a strategic framework to identify goals and commitments. This publication discusses the key components of such a policy. Issues covered include: the selection of essential drugs, affordability; finance and supply; regulation and quality assurance; rational use; research; human resources; monitoring and evaluation.

Genome editing is a powerful new tool for making precise alterations to an organism's genetic material. Recent scientific advances have made genome editing more efficient, precise, and flexible than ever before. These advances have spurred an explosion of interest from around the globe in the possible ways in which genome editing can improve human health. The speed at which these technologies are being developed and applied has led many policymakers and stakeholders to express concern about whether appropriate systems are in place to govern these technologies and how and when the public should be engaged in these decisions. Human Genome Editing considers important questions about the human application of genome editing including: balancing potential benefits with unintended risks, governing the use of genome editing, incorporating societal values into clinical applications and policy decisions, and respecting the inevitable differences across nations and cultures that will shape how and whether to use these new technologies. This report proposes criteria for heritable germline editing, provides conclusions on the crucial need for public education and engagement, and presents 7

general principles for the governance of human genome editing.

This report is the second in a series of three evaluating underexploited African plant resources that could help broaden and secure Africa's food supply. The volume describes the characteristics of 18 little-known indigenous African vegetables (including tubers and legumes) that have potential as food- and cash-crops but are typically overlooked by scientists and policymakers and in the world at large. The book assesses the potential of each vegetable to help overcome malnutrition, boost food security, foster rural development, and create sustainable landcare in Africa. Each species is described in a separate chapter, based on information gathered from and verified by a pool of experts throughout the world. Volume I describes African grains and Volume III African fruits.

This practical handbook will assist the physician and nurse prescriber in understanding the effects of drug exposure during pregnancy. Numerous tables and boxes provide information on drug classifications and regimens, as well as highlighting adverse effects and TERIS and FDA risk ratings. Sources of further information are provided where appropriate, and full references are available on the book's website www.drugs-and-pregnancy.com. web address to go here?The book provides detailed guidelines on prescribing drugs in all classes, and for a wide variety of diseases and disorders, during pregnancy. Opening with a helpful analysis of potential risks and benefits of prescribing in pregnancy, the book moves on to consider the implications of both medications for pre-existing conditions and those that develop during pregnancy, including antimicrobials, drugs for cardiovascular disease, asthma and endocrine disorders, antineoplastic agents, skin preparations, epilepsy treatments and psychiatric drugs. Invaluable guidance on anesthetic administration and the use of pain relieving medication during pregnancy and labor, and helpful advice on the possible side-effects associated with over-the-counter preparations such as cold and 'flu remedies, antihistamines and nutritional supplements is also provided.

Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

Ethiopia has experienced impressive agricultural growth and poverty reduction, stemming in part from substantial public investments in agriculture. Yet, the agriculture sector now faces increasing land and water constraints along with other challenges to growth. Ethiopia's Agrifood System: Past Trends, Present Challenges, and Future Scenarios presents a forward-looking analysis of Ethiopia's agrifood system in the context of a rapidly changing economy. Growth in the agriculture sector remains essential to continued poverty reduction in Ethiopia and will depend on sustained investment in the agrifood system, especially private sector investment. Many of the policies for a successful agricultural and rural development strategy for Ethiopia are relevant for other African countries, as well. Ethiopia's Agrifood System should be a valuable resource for policymakers, development specialists, and others concerned with economic development in Africa south of the Sahara.

"A publication by the U.S. Department of Commerce."
