Algae is a miracle of Nature. Rich, in Amino acids, Proteins, Lipids, Carbohydrates, Anti-oxidants, phycobiliproteins, and other valuable products, algae is being tapped as the new feedstock across industries. This Book describes how to build your own Photobioreactor to grow pure algae species (taxa). Algae, are Earths "engine" to fuel the food web. As a "primary producer," responsible for nearly half the oxygen production on Earth, the power of algae is being commercialized to produce valuable organic products. Build your own, Algae Photobioreactor (PBR) grow kit, to Cultivate valuable algal strains, and tap into the rapidly growing Algae Industry. Grow algae reliability, and repeatably, with Photobioreactor (PBR) Algae Grow Kits for controlled photosynthesis. Grow up to Four different Algal taxa using these 4-vessel Algae grow kits rated at 80 Liter total capacity. Complete with optical, mechanical, electrical, pneumatic, and biological systems, photobioreactors give you complete control. Growing monocultures of algae, using photobioreactors, is useful for researchers, developers, companies, universities, and those who need to cultivate Algal monocultures with purity, and minimal cost of construction. Algae, produce valuable amino-acids, proteins, carbohydrates, and essential oils (lipids) consuming water-borne pollution for nutrients. Algae species, grown with your PBR algae grow kits, enable researchers to tap algae's enormous productivity, able to double in mass in 24 hours under exponential growth phase. Algal researchers, work to develop protocols for increased production. Growing algae converts water, in-organic compounds (CO₂), and solar radiation into valuable organic molecules. This eBook is written as a resource for building your own photobioreactor, and growing valuable algal strains. This Book is written, as a resource for researchers, to construct an effective bioreactor, rated at 80 Liters, for growing algae monocultures. Isolated from contamination, these photobioreactors, offer the researcher total control of all inputs, and thermodynamic conditions, to grow a specific monoculture algal strain. Grow Algae for Profit, using photobioreactors, to produce useful quantities of pure species (taxa). Grow Algal Biomass, for your experiments, or for sale, with this easy-to-build Photobioreactor.

'It can be seen from the foregoing that this book constitutes a wide-ranging selection of good quality and interesting papers on a topic area of ongoing concern. . . Peter Moizer's introduction is succinct, cogent and provides a compelling structure within which to consider the papers. A further particularly nice feature of the selection is, that by often including two papers in a specific area, the manner in which extensions of ideas and refinements in method are highlighted, and thus the reader is given a flavour of how papers in a given area have developed: one gains a sense of living literatures. . . readers are unlikely to be disappointed. . . this volume constitutes a nicely judged and good selection of papers in the area of governance and auditing that is a useful addition to the shelves of anyone with an interest in this area.' - Pelham Gore, European Accounting Review This authoritative new collection contains reprints of seminal articles on the subject of auditing and its relationship to the way in which outside stakeholders monitor the activities of corporate management. Whilst the primary audience is students in upper-level undergraduate and graduate accounting courses, the book should also be of use to existing researchers, as it collects together the 'must read' articles on the subject in a readily accessible form.

This handbook provides a toolbox of definitions and typologies to develop a theory of multilevel constitutionalism and subnational constitutions. The volume examines systems with subnational entities that have full subnational constituent autonomy and systems where subnational constituent powers, while claimed by subnational governments, are incomplete or non-existent. Understanding why complete subnational constituent power exists or is denied sheds significant light on the status and functioning of subnational constitutions. The book deals with questions of how constitutions at multiple levels of a political system can co-exist and interact. The term 'multilevel constitutionalism', recognized as explaining how a supranational European constitution can exist alongside those of the Member States, is now used to capture dynamics between constitutions at the national, subnational and, where applicable, supranational levels. Broad in scope, the book encompasses many different types of multi-tiered systems world-wide to map the possible meanings, uses and challenges of subnational or state constitutions in a variety of political and societal contexts. The book develops the building blocks of an explanatory theory of subnational constitutionalism and as such will be an essential reference for all those interested in comparative constitutional law, federalism and governance.
