Teacher candidates seeking certification to teach the middle-level grades in Texas's public schools must pass the TExES Core Subjects 4-8 exam. Written by a team of faculty experts led by Dr. Ann M. L. Cavallo, Associate Dean for Research and Graduate Studies at the University of Texas at Arlington, REAs test prep provides extensive coverage of the four core subject areas tested on the exam: English Language Arts and Reading (806); Mathematics (807); Social Studies (808); and Science (809). In addition to a thorough review, this test prep features a diagnostic test and 2 full-length practice test batteries (1 in the book and 1 online at the REA Study Center) that deal with every question type, competency, and skill tested on the exam. REAs online tests run under timed conditions and provide automatic scoring and diagnostic feedback on every question to help teacher candidates zero in on the topics that give them trouble now, so they can succeed on test day. -- Amazon.com.

Elementary World History Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Big Book of History Learning just became big fun! Unfold 15 feet of the most interesting history of the world. This easy to follow, color-coded, multi-stream timeline teaches six thousand years of world history to children ages seven through thirteen. Discover technology and inventions, biblical and Christian history, world events, civilizations, and empires. These exciting facts and so much more wait inside: who were the first emperors of China and Rome what discovery unlocked the secrets of a forgotten language how modern robotics had its roots in the tea dolls of Japan where Christians faced death for the entertainment of thousands why the languages of Greek and Hebrew were used to write the Bible and how the Age of Discovery meant wealth some, and the destruction of civilization for others. Understanding how the past has shaped our future will inspire young learners in a uniquely visual way to make history for themselves! Noah's Ark: Thinking Outside the Box book and DVD Could a ship be constructed that would be able to survive the global flood described in biblical book of Genesis? Could it be built without the modern techniques of today being available to Noah? This groundbreaking book and DVD set answers both of these questions with a resounding “yes”! Join naval expert and mechanical engineer Tim Lovett in “thinking outside the box” as you consider critical research in this innovative study on Noah’s ark. Lovett builds on traditional research into this historic event using the latest techniques in computer modeling and testing. Includes insight and context by pioneering creationist researcher, Dr. John Whitcomb. Unveils a new ark design based on biblical information and shipbuilding principles Beautiful illustrations and photos reveal facets of design and construction techniques Animations, interviews, and images of the Ark explain the most perplexing questions Remaining faithful to the biblical dimensions, Lovett’s updated design, similar to that of ancient sailing vessels, is based on established principles in ship design and unique research. He reveals a feasible ark design, explores the impact of flood waters on the vessel, and provides remarkable insight and analysis into the skills and techniques needed to construct it. Look inside the ship that saved Noah and his family, as well as the animal kinds!

6th graders can reinforce what they learn in school with a workbook from Brain Quest. The book boasts 300 pages jam-packed with curriculum-based activities and exercises in every subject, with a focus on math and language arts. Written in consultation with the Brain Quest Advisory Panel of award-winning teachers specific to each grade level, and with all content aligned with Common Core standards. Plus fun stuff: Each workbook comes with a mini-deck with 100 all-new Brain Quest questions and answers.

Preparing children to become citizens of a democracy requires recognition of the different ways in which children learn about politics. Kids in the United States currently spend most of their lives in controlled situations such as schools where the dependency they experience in their homes is reinforced. Besides teachers - books, films, television, and video games influence how children think about democracy. Interviews and surveys of children during three Presidential elections and two non-Presidential years show how some sixth-graders in a Vermont town react to the political issues raised in those elections. Besides presenting the children's voices, Sugarman also examines some aspects of the media and of the school situation to see how they effect the children's thinking. Changes that might improve the children's understanding and knowledge of democracy are also suggested. This book should be of interest to parents, teachers, those involved in media literacy, popular culture, and child development.

Now even more complete, with updated lists of available resource materials, this manual is your access guide to home schooling- maximizing our family life while providing a quality education for your children. If you're considering homeschooling, this book is a must-read before you decide; and if you've been at it for awhile, it's a fresh perspective, with plenty of tactics for renewing your energy and motivating your kids. What is the historical role of the barbershop in the African American community? and What was Black Wall Street? Blending trivia with historical review in an engaging question-and-answer format, this book is perfect for browsing and is ideal for history buffs, trivia fans, students and

teachers and anyone interested in a better and more thorough understanding of history of black Americans.

Introduction to Meteorology and Astronomy Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Meteorology The Earth was created to be the dwelling place of man. It is a complex world and its weather patterns affect our lives every day. Whether you live near the equator, a polar region, or somewhere in between, knowledge of the weather is important. The Weather Book will teach you: why our exact distance from the sun allows life on earth, how the weather on the other side of the earth affects you, how clouds form and how to identify the different types, what the difference is between a cold and warm front, why you can often see lightning long before you can hear thunder, how to build your own weather station, how to survive in dangerous weather, what the greenhouse effect and the ozone hole are, what Noah's flood and the Ice Age have in common, how weatherpersons forecast hurricanes and tornadoes, how to read a weather map, and what our responsibility is to the environment. Learning about the weather is fun! It will change the way you look at the clouds in the sky. Now you'll have more of an understanding about what is going on miles above your head. And when you hear a weather report on television, you will understand so much more about the world around you!. Semester 2: Astronomy One thing we have in common with the ancients is that all of the human race has gazed at the night sky, and the bright morning, and wondered, "What's out there?" Our universe is so vast and awe-inspiring that to learn about it is to learn about ourselves. The Astronomy Book will teach you: what long-ago astronomers thought about other worlds, solar system facts, how constellations relate to astrology, the history of space exploration, black holes-do they exist?, the origin and age of the moon, why Mars doesn't support life, the composition of stars, supernova remnants, and the myth of star birth, asteroid legends and the extinction of the dinosaurs, are there planets outside our solar system, and could they be home to intelligent life?, what are UFOs?, and the age of comets and meteor showers. Learning about the universe is huge fun! In the almost infinite expanse above us, we can examine planets, galaxies, and phenomena so beautiful and complex that we never outgrow a childlike wonder. We see our own reflection in the moon, the stars, and in comet trails. The more we learn, the less we fear!
