For 40 years, Lamborghini has been one of the world's most flamboyant and exotic car marques. Written by a long-term Lamborghini insider, the book tells, for the first time, the real story of the men who kept the Italian company alive, making cars bought by wealthy business executives, show business celebrities, and sports stars. Custodians of Lamborghini have included Chrysler and businessmen in Switzerland and Asia. Now Lamborghini sits alongside Bugatti at Audi, part of the Volkswagen Group. Previous Lamborghini books have been little more than collections of pictures of the cars and technical descriptions, but this one describes the character of the men whose passion for Lamborghini kept the company alive. The book is published in 2004 as the all-new Lamborghini Gallardo goes on sale, 41 years after the original 350GTV burst onto the scene at the Turin auto show. A comprehensive index to company and industry information in business journals.

This book includes over 30 real-life, up-to-date, award-winning case studies in scientific fields such as biotechnology, biomedicine, high-tech engineering and information technology. The case studies are arranged in modules that track the typical life cycle of creating and growing a new venture, which presents a comprehensive picture of entrepreneurial activities. The text is written in a language and style that managers will appreciate.

This report identifies policy options and makes recommendations on market-oriented actions to promote the purchase of the most environmentally friendly vehicles.

This illustrated work covers the stories of five British engineering companies that produced successful ranges of agricultural, earthmoving or construction machinery. County, Doe, Chaseside, Muir-Hill, Matbro and Bray all made extensive use of the Ford tractor skid unit as a basis for their machines and they pioneered the development of the four-wheel drive agricultural tractor in Britain. Stuart Gibbard gives details of all the main models and machines of these manufacturers. He chronicles the fortunes of the firms from the beginning of the 20th century to the present day and discusses many of the personalities involved.

Conditions for travel have changed and are still changing the world a world experiencing what John Urry calls the mobility turn . Since World War Two we have been moving faster and going further a fact that has profoundly changed our way of experiencing both the world and ourselves. The explosion of low-cost travel options has similarly had an important impact on the economy, adding to the globalization of markets and transformations in modes of production. It is no longer possible to think of nation-states as autonomous vis-a-vis one another, nor of cities or regions as homogenous spaces delimited by clear-cut borders. Societies, like Western cities, are redefining themselves through mobility. What does this mean for the city for its governability and governance? In this book Vincent Kaufmann assesses the urban implications of the mobility turn. He explores the modern urban phenomenon

from the point of view of the mobility capacities of its players their motility. He asks that the reader consider the idea of a city or region as the product or an arrangement of a specific set of motilities. Re-Thinking the City seeks to identify how the motility of individuals, goods, and information acts as an organizing principle or rather, the organizing principle of contemporary urban change, and then aims to examine the consequences for urban governance by exploring the channels through which individual and collective motility can be regulated.

This is a brilliant examination of the complex processes of the post-1990 transformation in the Czech automotive industry and its selective integration into the West European system. The post-1990 restructuring of the industry is analyzed in the context of its pre-1990 development and in the context of the East European automobile industry as a whole. Specifically, the book examines the development and post-1990 restructuring of the Czech car, components, and truck industries.

The little grey Fergie is Britain's best-loved tractor, the light user-friendly machine that finally replaced the horse on farms. This highly illustrated account covers the full history of Harry Ferguson's tractor products from his pioneering work before the 1930s to the merger with Massey in 1957. The author has had access to fresh archive material and has interviewed many of the surviving men who were associated with Ferguson. The appeal of the Fergie lay in its lightness and utility, and also in the system of mechanized farming of which it was a part. Throughout the book, reference is made to the implements which lay at the heart of the system. Stuart Gibbard has won "Tractor and Machinery" magazine's award for the best British tractor book five years running. The Doe Triple D became a legend in its own lifetime. It was one of the most unorthodox tractors ever built and had two engines, four wheel drive and could articulate through nearly 90 degrees. A very successful machine in its own time, it has remained a firm favourite among tractor enthusiasts everywhere. This illustrated account tells the full story of this remarkable tractor and the company that built it. The rise of Essex company Ernest Doe & Sons from a village blacksmith's shop to the largest machinery retail organization in East Anglia is traced in detail with full coverage given to the machines it made.

Once Upon a Car is the fascinating epic story of the rise, fall, and rebirth of the Big Three U.S. automakers, General Motors, Ford, and Chrysler. Written by Bill Vlasic, the Detroit bureau chief for the New York Times and acclaimed author of Taken for a Ride, this eye-opening, richly anecdotal work is more than a riveting and insightful business history. It offers a clear-eyed view of the present day automobile industry and of Detroit, the city that spawned it, going far beyond the corporate and federal maneuverings to explore the impact the car companies' failures have had on the overall economy, and more importantly what they have done to people's lives. Relevant and thought-provoking, Once Upon a Car is an unforgettable journey deep inside this quintessentially American industry.

This clear and lively introduction to probability theory concentrates on the results that are the most useful for applications, including combinatorial probability and Markov chains. Concise and focused, it is designed for a one-semester introductory course in probability for students who have some familiarity with basic calculus. Reflecting the author's philosophy that the best way to learn probability is to see it in action, there are more than 350 problems and 200 examples. The examples contain all the old standards such as the birthday problem and Monty Hall, but also include a number of applications not found in other books, from areas as broad ranging as genetics, sports, finance, and inventory management.

Lightweight Electric/Hybrid Vehicle Design, covers the particular automotive design approach required for hybrid/electrical drive vehicles. There is currently huge investment world-wide in electric vehicle propulsion, driven by concern for pollution control and depleting oil resources. The radically different design demands of these new vehicles requires a completely new approach that is covered comprehensively in this book. The book explores the rather dramatic departures in structural configuration necessary for purpose-designed electric vehicle including weight removal in the mechanical systems. It also provides a comprehensive review of the design process in the electric hybrid drive and energy storage systems. Ideal for automotive engineering students and professionals Lightweight Electric/Hybrid Vehicle Design provides a complete introduction to this important new sector of the industry. comprehensive coverage of all design aspects of electric/hybrid cars in a single volume packed with case studies and applications in-depth treatment written in a text book style (rather than a theoretical specialist text style)

The trade of global bioenergy commodities, such as ethanol, biodiesel and wood pellets has been growing exponentially in the past decade, and have by 2013 reached true "commodity" volumes, i.e. tens of millions of tonnes traded each year, and billions (both in US\$/€) of annual turnover. IEA Bioenergy Task 40 was founded in 2004 and is now in its 4th triennium. For the past 9 years, task 40 has monitored the developments in international bioenergy trade, including the organization of about 20 workshops on trade-related topics, and the publication of over 100 studies, country reports, newsletters, etc. The amount of material produced over the years and insights gained in how biomass markets and international trade of biomass and biofuels has developed is impressive. Besides that the group has produced overviews and insights, also a large amount of practical experience has been brought together in what works and what doesn't. Last but not least, based on
