Juval Portugali The notion of complex artificial environments (CAE) refers to theories of complexity and self-organization, as well as to artifacts in general, and to artificial environments, such as cities, in particular. The link between the two, however, is not trivial. For one thing, the theories of complexity and self-organization originated in the “hard” science and by reference to natural phenomena in physics and biology. The study of artifacts, per contra, has traditionally been the business of the “soft” disciplines in the humanities and social sciences. The notion of “complex artificial environments” thus implies the supposition that the theories of complexity and self-organization, together with the mathematical formalisms and methodologies developed for their study, apply beyond the domain of nature. Such a supposition raises a whole set of questions relating to the nature of 21 century cities and urbanism, to philosophical issues regarding the natural versus the artificial, to the methodological legitimacy of interdisciplinary transfer of theories and methodologies and to the implications that entail the use of sophisticated, state-of-the-art artifacts such as virtual reality (VR) cities and environments. The three-day workshop on the study of complex artificial environments that took place on the island of San Servolo, Venice, during April 1-3, 2004, was a gathering of scholars engaged in the study of the various aspects of CAE.

Public Relations and Social Theory: Key Figures, Concepts and Developments broadens the theoretical scope of public relations studies by applying the work of a group of prominent social theorists to make sense of the practice. The volume focuses on the work of key social theorists, including Max Weber, Karl Marx,

John Dewey, Jürgen Habermas, Niklas Luhmann, Michel Foucault, Ulrich Beck, Pierre Bourdieu, Anthony Giddens, Robert Putnam, Erving Goffman, Peter L. Berger, Gayatri Chakravorty Spivak, Bruno Latour, Dorothy Smith, Zygmunt Bauman, Harrison White, John W. Meyer, Luc Boltanski and Chantal Mouffe. Each chapter is devoted to an individual theorist, providing an overview of that theorist's key concepts and contributions, and exploring how these can be applied to public relations as a practice. Each chapter also includes a box giving a short and concise presentation of the theorist, along with recommendation of key works and secondary literature.

Aimed at beginning therapists and those new to object relations, this concise work introduces the reader to the practice of psychodynamic psychotherapy from an object relations (O-R) perspective in a dynamic and easy-to-follow way. One of the four main schools of psychodynamic psychotherapy, O-R is regarded as particularly challenging, both conceptually and practically. The book presents object relations in a clear and concise manner that makes it especially applicable for regular use in the clinical setting. Moreover, the author writes in a narrative style similar to actual psychotherapy supervision; dialogues between a therapist and a fictitious patient appear throughout the book to illustrate common clinical situations. Designed to complement actual training in psychotherapy, the book

suggests ways in which the therapist can incorporate object relations tools with other forms of therapy, regardless of the clinical setting. Ideal for students, trainees, and clinicians in psychiatry, psychology, social work, family medicine, and psychiatric nursing, *The Little Psychotherapy Book* will prove invaluable for any reader seeking a helpful and succinct introduction to object relations in psychotherapy.

Drawing on contributions from the 2018 congress of the European Public Relations Education and Research Association (EUPRERA), this volume explores and analyses challenges around communication, management and big ideas to present findings from current research in corporate communication. This book examines US subnational engagement in foreign relations, or paradiplomacy, with China and Taiwan from 1949 to 2020. As an alternative diplomatic history of the United States' relations with divided China, it offers an in-depth chronological and thematic discussion of state and local communities' responses to the China-Taiwan sovereignty conflict and their impact on US diplomacy. The book explains why paradiplomacy matters not only in the 'low politics' of economic and cultural cooperation, but also in the 'high politics' of diplomatic recognition. Presenting case studies of US states and cities developing policies towards divided China that paralleled, clashed or aligned with

those pursued by federal agencies, it also identifies Chinese and Taiwanese objectives and strategies deployed when competing for US subnational ties. Conceptually, the book builds upon Constructivism, redefining paradiplomacy as an institutional fact, reflective of subnational identities and interests, rather than as a subnational pursuit of foreign markets, driven by objective economic forces. Featuring new empirical evidence and a novel conceptual framework for paradiplomacy, *The United States' Subnational Relations with Divided China* will be a useful resource for students and scholars of US foreign policy, the politics of China and Taiwan, paradiplomacy and international relations.
