Sitecore Instance Manager 1 2 User Guide

In Volume 2 I stated sequels are never as good, that means by this point you must be a sucker for punishment. As ever, here we have yet another light-hearted look at some useful Sitecore tips. With a marriage, a birth, a skiing accident, and a global pandemic all taking place since Volume 2, there has been quite a delay in Volume 3 entering the world - meaning this book only takes us up to 9.1 Initial Release, even though we're now on Sitecore v10.1!

As part of this multilayered conversation about stigma, this volume discusses the relationship between the stigmatized individual and our role as researchers. Here we address our own perspectives as researchers struggling with stigma issues and tellability, as well as scholarly reflexive concerns dealing with what can't be said when working with stigmatized groups or topics. The disciplinary focus of folklore positions us well to concentrate on the vernacular experience of the stigmatized, but it also propels us toward analysis of the performance of stigma, the process of stigmatization, and the political representation of stigmatized populations. These perspectives come to the fore in this book, as does the multilayered nature of stigma—its ability to reproduce, overlap, and spread, not just in terms of replication but also in terms of the ethnographer's ability to apprehend it and her ability to research and write about it.

A cutting-edge, solutions-oriented analysis of how we can reimagine cities around the world to build sustainable futures. What would it take to make urban places greener, more affordable, more equitable, and healthier for everyone? In recent years, cities have stepped up efforts to address climate and sustainability crises. But progress has not been fast enough or gone deep enough. If communities are to thrive in the future, we need to quickly imagine and implement an entirely new approach to urban development: one that is centered on equity and rethinks social, political, and economic systems as well as urban designs. With attention to this need for structural change, Reimagining Sustainable Cities advocates for a community-informed model of racially, economically, and socially just cities and regions. The book aims to rethink urban sustainability for a new era. In Reimagining Sustainable Cities, Stephen M. Wheeler and Christina D. Rosan ask big-picture questions of interest to readers worldwide: How do we get to carbon neutrality? How do we adapt to a climate-changed world? How can we create affordable, inclusive, and equitable cities? While many books dwell on the analysis of problems, Reimagining Sustainable Cities prioritizes solutions-oriented thinking--surveying historical trends, providing examples of constructive action worldwide, and outlining alternative problem-solving strategies. Wheeler and Rosan use a social ecology lens and draw perspectives from multiple disciplines. Positive, readable, and constructive in tone, Reimagining Sustainable Cities identifies actions ranging from urban design to institutional restructuring that can bring about fundamental change and prepare us for the challenges ahead.

Now completely revised to bring you up to date with the latest advances in the field, Critical Care Medicine: Principles of Diagnosis and Management in the Adult, 5th Edition, delivers expert, practical guidance on virtually any clinical scenario you may encounter in the ICU. Designed for intensivists, critical care and pulmonology residents, fellows, practicing physicians, and nurse practitioners, this highly regarded text is clinically focused and easy to reference. Led by Drs. Joseph Parrillo and Phillip Dellinger, the 5th Edition introduces numerous new authors who lend a fresh perspective and contribute their expertise to that of hundreds of top authorities in the field. Includes new chapters on current applications of bedside ultrasound in the ICU, both diagnostic and procedural; mechanical assist devices; and extra-corporeal membrane oxygenation (ECMO). Social entrepreneurship is a growing area, and we frequently hear of new ventures committed to social change. In academia, however, social entrepreneurship has typically been taught as a 'version' of entrepreneurship, ignoring the unique structure, challenges and goals of the social venture. In their new book, Coleman and Kariv draw on the latest theory and research to provide boundaries to the definition of social entrepreneurship, discussing both what it is, and what it is not. The book answers several key questions: Who are social entrepreneurs? What is the process for identifying and solving a social need? What are the differences between for-profit and not-for-profit social ventures? What is the role of innovation? How do we develop high performing firms? How do we measure success? The focus on context allows students to appreciate how social entrepreneurship develops and operates in different countries and cultures, lending a global perspective to the book. Combined with rich pedagogy and a companion website, it provides students with all the learning tools they need to grasp this important subject.

This report finds that Europe is not doing enough to protect itself from the threats to water resources in large parts of the continent.

Urgent action is required to safeguard water quality and availability in the UK and many areas of Europe which are already suffering from the effects of a significant lack of rain. The Government should bring forward the deadline for reforming the water abstraction regime, outlined in its Water White Paper ('Water for life', Cm. 8230, ISBN 9780101823029). More than 10% of rivers are abstracted to an extent that may damage water ecosystems, but the Government has set a target of the mid to late 2020s for reforming the regime, which fails to respond to the urgency of the situation. Other recommendations include: the EU must start planning immediately for a future in which water resources will be increasingly uncertain; the Government must allow the cost of water to increase where other measures to tackle water scarcity have failed; more must be done to promote the catchment level as an important level of governance, in the Blueprint for the future of the EU's water resources (due later this year); local stakeholders (for example, rivers trusts, amenity groups, anglers and farmers) should be allowed to play a much greater role in decisions on issues such as river catchments, in order to reconnect people with the value of water as a resource; and the EU should encourage all Member States to develop national water scarcity and drought management plans.

The Hanford Site was established by the federal government in 1943 as part of the secret wartime effort to produce plutonium for nuclear weapons. The site operated for about four decades and produced roughly two thirds of the 100 metric tons of plutonium in the U.S. inventory. Millions of cubic meters of radioactive and chemically hazardous wastes, the by-product of plutonium production, were stored in tanks and ancillary facilities at the site or disposed or discharged to the subsurface, the atmosphere, or the Columbia River. In the late 1980s, the primary mission of the Hanford Site changed from plutonium production to environmental restoration. The federal government, through the U.S. Department of Energy (DOE), began to invest human and financial resources to stabilize and, where possible, remediate the legacy of environmental contamination created by the defense mission. During the past few years, this financial investment has exceeded $1 billion annually. DOE, which is responsible for cleanup of the entire weapons complex, estimates that the cleanup program at Hanford will last until at least 2046 and will cost U.S. taxpayers on the order of $85 billion. Science and Technology for Environmental Cleanup at Hanford provides background information on the Hanford Site and its Integration Project,discusses the System Assessment Capability, an Integration Project-developed risk assessment tool to estimate quantitative effects of contaminant releases, and reviews the technical elements of the scierovides programmatic-level recommendations.

"In recent years the Three Rivers region of Belize and Guatemala has been the site of some of the most intensive archaeological research in the Maya Lowlands, providing a wealth of regional data. This volume brings together articles reporting on findings and interpretations of the Programme for Belize Archaeological Project that range over a 10- to 12-year period and that shed new light on how ecology, economy, and political order developed in the ancient past.".

Policy based systems are the subject of a wide range of activities in univer- ties, standardisation bodies, and within industry. They have a wide spectrum of applications ranging from quality of service management within networks to - curity and enterprise modelling. This Lecture Notes volume collects the papers presented at the workshop on Policies for Distributed Systems and Networks held at the Hewlett-Packard Laboratories in Bristol, UK in January 2001. After a rigorous review process 16 papers were selected from 43 submissions. Within the Internet community there is considerable interest in policy based networking. A number of companies have announced tools to support the sp- i?cation and deployment of policies. Much of this work is focused on policies for quality of service management within networks and the Internet Engineering and Distributed Management Task Force (IETF/DMTF) is actively working on standards related to this area. The security community has focused on the speci?cation and analysis of - cess control policy which has evolved into the work on Role-Based Access Control (RBAC). There has been work

over a number of years in the academic c- munity on speci?cation and analysis of policies for distributed systems mostly concentrating on authorisation policies. Although there are strong similarities in the concepts and techniques used by the di?erent communities there is no commonly accepted terminology or notation for specifying policies.

Rev. ed. of: Clinical diagnosis and management by laboratory methods / [edited by] John Bernard Henry. 20th ed. c2001.

This book is a completely revised new edition of the definitive reference on disorders of hemoglobin. Authored by world-renowned experts, the book focuses on basic science aspects and clinical features of hemoglobinopathies, covering diagnosis, treatment, and future applications of current research. While the second edition continues to address the important molecular, cellular, and genetic components, coverage of clinical issues has been significantly expanded, and there is more practical emphasis on diagnosis and management throughout. The book opens with a review of the scientific underpinnings. Pathophysiology of common hemoglobin disorders is discussed next in an entirely new section devoted to vascular biology, the erythrocyte membrane, nitric oxide biology, and hemolysis. Four sections deal with ? and ? thalassemia, sickle cell disease, and related conditions, followed by special topics. The second edition concludes with current and developing approaches to treatment, incorporating new agents for iron chelation, methods to induce fetal hemoglobin production, novel treatment approaches, stem cell transplantation, and progress in gene therapy.

Plants make up 99.9 percent of the world's living matter, provide food and shelter, and control the Earth's climate. The study of plant ecology is therefore essential to understanding the biological functions and processes of the biosphere. This vibrant introductory textbook integrates important classical themes with recent ideas, models and data. The book begins with the origin of plants and their role in creating the biosphere as the context for discussing plant functional types and evolutionary patterns. The coverage continues logically through the exploration of causation with chapters, amongst others, on resources, stress, competition, predation, and mutualism. The book concludes with a chapter on conservation, addressing the concern that as many as one-third of all plant species are at risk of extinction. Each chapter is enriched with striking and unusual examples of plants (e.g., stone plants, carnivorous plants) and plant habitats (e.g., isolated tropical tepui, arctic cliffs). Paul Keddy writes in a lively and thought-provoking style which will appeal to students at all levels.

Coronary artery bypass surgery has been developed since 1960s to overcome proximal coronary artery disease. Worldwide, the number of patients that are undergoing coronary artery bypass surgery is steadily increasing. Depending on diverse risk factors, one fifth of grafts are occluded at 1 year. For the remaining, graft patency last usually 8–15 years. This book brings together the main specialists in the field to review the current evidence on epidemiology, pathophysiology, diagnostic, new imaging techniques and specific therapeutic modalities. This volume aims to update a complex subject represented by coronary graft failure. The authors of this monograph are interventional cardiologists, cardiovascular surgeons and research scientists, who will be creating four parts and 71 chapters that are divided in order to give a uniform interpretation of this condition including all aspects of coronary graft failure This book not only provides the most up-to-dated scientific evidence in the field but in a two-step manner. Each chapter is divided into a at a glance part that reflects the basic evidence on the topic, and a "full picture" part that brings all what the advanced reader should be brought with.
