This book gives an overview of astrology in layman's terms, making the horoscope wheel and other difficult concepts easier to grasp. This is a compilation of 12 books, one on each zodiacal sign, in which the author discusses basic astrology for novices and then the challenging traits of each zodiac sign. Tips are included for the inherent pitfalls of each zodiac sign, so that weaknesses can be turned into strengths. This book also can help friends and family to comprehend their loved ones more easily and is meant to be a tool for both confirmation and understanding of the people with each zodiac sign.

The book begins with an educational theory guide, to help deepen your understanding of why your horse is acting the way he does and what his motivating factors are. Following the theory guide are over 77 Solutions for herd bound behavior. Included in these solutions are exercises divided into sections individualized to how your horse is kept; Stall, Pasture, Pair bonded, etc. It also includes strategies for riding, Emergency "In the moment" solutions and pages to record your progress on. These strategies can be used with each member of the herd, this is most valuable in situations where a single buddy horse is left behind. By using the exercises, programs and approaches you can create horses that are more self confident and able to be separated with more ease and relaxation. I am incredibly excited to get this information in the hands of horse lovers who struggle with this frustrating and destructive issue! There is nothing more peaceful then hearing horses munching on grass instead of screaming for their herd mate!

Tony Gaddis's accessible, step-by-step presentation helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the C++ programming language by presenting all the details needed to understand the "how" and the "why"—but never losing sight of the fact that most beginners struggle with this material. His approach is both gradual and highly accessible, ensuring that students understand the logic behind developing high-quality programs. As with all Gaddis texts, clear and easy-to-read code listings, concise and practical real-world examples, and an abundance of exercises appear in every chapter. This text is intended for either a one-semester accelerated introductory course or a traditional two-semester sequence covering C++ programming.

"You're in luck, Alfred," he declared. "That's the most interesting man in New York-one of the most interesting in the world. That's Sanford Quest." "Who's he?" "You haven't heard of Sanford Quest?" "Never in my life." The young man whose privilege it was to have been born and lived all his days in New York, drank half a glassful of wine and leaned back in his chair. Words, for a few moments, were an impossibility. "Sanford Quest," he pronounced at last, "is the greatest master in criminology the world has ever known. He is a magician, a scientist, the Pierpont Morgan of his profession." "Say, do you mean that he is a detective?" The New Yorker steadied himself with an effort. Such ignorance was hard to realise-harder still to deal with. "Yes," he said simply, "you could call him that-just in the same way you could call Napoleon a soldier or Lincoln a statesman..."

Let Us C has been part of learning and teaching material in mostEngineering and Science Institutes round the country for years now.From last year or so, I received several suggestions that its size bepruned a bit, as many learners who learn C language in their Engineeringor Science curriculum have some familiarity with it. I am happy to fulfillthis request. I hope the readers would appreciate the lean look of thecurrent edition.In one of the previous edition I had realigned the chapters in such amanner that if a C programming course is taught using Let Us C, it can befinished in 22 lectures of one hour each, with one chapter's contentsdevoted to one lecture. I am happy that many readers liked this idea andreported that this has made their learning path trouble-free. A morerational reorganization of end-of-chapter exercises in the book has alsobeen well-received. Riding on that feedback I had introduced one morefeature in the fifteenth edition-KanNotes. These are hand-craftednotes on C programming. From the reader's emails I gather that theyhave turned out to be very useful to help revise their concepts on theday before the examination, viva-voce or interview.Many readers also told me that they have immensely benefitted fromthe inclusion of the chapter on Interview FAQs. I have improved thischapter further. The rationale behind this chapter is simple-ultimatelyall the readers of Let Us C sooner or later end up in an interview roomwhere they are required to take questions on C programming. I nowhave a proof that this chapter has helped to make that journey smoothand fruitful.All the programs present in the book (and some more) are available insource code form at www.kicit.com/books/letusc/sourcecode. You arefree to download them, improve them, change them, do whatever withthem. If you wish to get solutions for the Exercises in the book they areavailable in another book titled 'Let Us C Solutions'. If you want somemore problems for practice they are available in the book titled 'Let Us CWorkbook'. As usual, new editions of these t

These are the musings and sketchings of an old geologist informally proposing new theory of how the Atlantic Ocean gets wider. Laymen: this is pitched to you. Geoscientists: your initial knee-jerk reaction might be "blithering blasphemy." Later these ideas may grow on you. One hundred fifty+ million years ago the Atlantic was a lineup of fresh water lakes, and now it is an ocean 3000 miles wide. Down the middle of the Atlantic a submarine mountain chain overlies miles-thick volcanic rock. Continuing eruptions of volcanic rock below those mountains add an inch a year to the edges of two of the earths plates which meet there. The Moho is a world-wide interface from 5 to 30 miles below the earth's surface. Velocities of sound are slower above and faster below the Moho. Oceanic crust and continental crust float on the Moho. The material below the Moho is usually stable, but if its confining pressure drops, that material locally transitions to lava. This is a reversible change of state, involving the release of heat when lava is created under the expanding Atlantic, and involving the acquisition of heat by slabs of transitioning oceanic basalt descending hundreds of miles around the edges of the shrinking Pacific. Pressure-depth graphs are essential tools for understanding the new theory. A byproduct of using this discipline is a more detailed interpretation of the May 18, 1980 eruption at Mt. St. Helens. There were two fluid systems in play that day: water and magma. Initially there was a 5.2 earthquake. This triggered a large landslide, which unleashed a massive underground steam explosion, lasting a minute or two. This reduced the pressure restraining the magma (lava), which then erupted.

Will Jelbert had what many people would consider the ideal life: a well paying job, a beautiful wife and a great apartment, but he still wasn't happy. One day the life he knew came to an abrupt end when he was thrown from his bike, face first into the sidewalk of a Sydney street. After a year in recovery, Jelbert decided to dedicate the next three years to a happiness research project. The result: The Happiness Animal. The world's first dedicated exercise guide to happiness condenses the latest applied positive psychology research into a guide to five muscles for happiness. For each muscle, Jelbert provides five simple exercises that you can apply to your everyday life, without having to adjust your schedule. Perfect for people in all walks of life, the exercises in The Happiness Animal will move you toward profound personal change and act as a driving force for your happiness.. Editorial Reviews: * * * * * "Will has an incredible ability to say things that are logical and obvious, although without somebody pointing them out in the clear way he has done, most of us don't ever think them. He identifies the power of awareness, but before I read his book I was not even aware of many of my own thoughts" - Danny Lawrence, BBC * * * * * "Will has captured an immense understanding of the inner workings of society's struggle to find happiness with a whole hearted and honest truth. The exercises explained are an excellent route back to the inner being of happiness. A must read for everyone!" - Sadie Oliver, LIFE magazine * * * * * "Will writes with honesty, authenticity and animation that allows the words on each page to come alive and live within the reader" - Lucy Proud, The Art of Being Voted "Best Happiness Book" on Goodreads
