Travellers today face many challenges from risk and safety issues. Focusing in particular on risk and safety issues faced by visitors to holy sites, this book looks at the unique challenges raised, where annual religious festivals are commemorated with mass gatherings lasting for days and large crowds require detailed disaster management plans. Beginning with a general section on risk management, covering areas such as disaster management, terrorism, crime and security, the book then delves deeper into specific issues and challenges. It reviews important topics such as understanding the behaviour of crowds, how to perform a risk assessment for a sacred space, and travelling in what some would regard as an increasingly hostile world. Mitigating risk at mass gathering events and festivals is an area that still needs further research, but this book brings together current thought and provides a valuable reference for those studying religion, tourism and events, as well as event organizers, emergency and hospital services, and local authorities.

Events of all types are produced every day for all manner of purposes, attracting all sorts of people. To provide a safe and secure setting in which people gather is imperative. Event risk and hazard management must be fully integrated into all event plans and throughout the event management process. Hazard management is the planning process required for the effective management of potential adverse incidents and areas of uncertainty. It involves intensive, detailed planning and cooperation to apply control systems to minimise hazards associated with venues, outdoor sites, work procedures, facilities, equipment and crowds of spectators. It involves planning for emergencies and security, and compliance with legal constraints and requirements. Risk and Hazard Management for Festivals and Events provides students with a comprehensive, fully integrated planning and management mechanism that can be applied to events of all types and size. The Event Safety Management System provides guidelines and processes for proactive methods to identify, assess and control hazardous conditions and practices. The system incorporates design of festival venues and sites, and unites the operational functions of crowd control, communications, security, terrorism prevention processes and emergency response protocols. Explanation of the causes of crowd disasters and studies into crowd behaviour are supported with international case studies. Written in an accessible, practical way, this book is essential reading for all events students and event managers.
