

Waking Tiger Peter A Levine

Now in 24 languages. Nature's Lessons in Healing Trauma... Waking the Tiger offers a new and hopeful vision of trauma. It views the human animal as a unique being, endowed with an instinctual capacity. It asks and answers an intriguing question: why are animals in the wild, though threatened routinely, rarely traumatized? By understanding the dynamics that make wild animals virtually immune to traumatic symptoms, the mystery of human trauma is revealed. Waking the Tiger normalizes the symptoms of trauma and the steps needed to heal them. People are often traumatized by seemingly ordinary experiences. The reader is taken on a guided tour of the subtle, yet powerful impulses that govern our responses to overwhelming life events. To do this, it employs a series of exercises that help us focus on bodily sensations. Through heightened awareness of these sensations trauma can be healed.

Written for those working to heal developmental trauma and seeking new tools for self-awareness and growth, this book focuses on conflicts surrounding the capacity for connection. Explaining that an impaired capacity for connection to self and to others and the ensuing diminished aliveness are the hidden dimensions that underlie most psychological and many physiological problems, clinicians Laurence Heller and Aline LaPierre introduce the NeuroAffective Relational Model® (NARM), a unified approach to developmental, attachment, and shock trauma that, while not ignoring a person's past, emphasizes working in the present moment. NARM is a somatically based psychotherapy that helps bring into awareness the parts of self that are disorganized and dysfunctional without making the regressed, dysfunctional elements the primary theme of the therapy. It emphasizes a person's strengths, capacities, resources, and resiliency and is a powerful tool for working with both nervous system regulation and distortions of identity such as low self-esteem, shame, and chronic self-judgment.

How traumatic events can break our vital connections—and how to restore love, wholeness, and resiliency in your life From our earliest years, we develop an attachment style that follows us through life, replaying in our daily emotional landscape, our relationships, and how we feel about ourselves. And in the wake of a traumatic event—such as a car accident, severe illness, loss of a loved one, or experience of abuse—that attachment style can deeply influence what happens next. In *The Power of Attachment*, Dr. Diane Poole Heller, a pioneer in attachment theory and trauma resolution, shows how overwhelming experiences can disrupt our most important connections— with the parts of ourselves within, with the physical world around us, and with others. The good news is that we can restore and reconnect at all levels, regardless of our past. Here, you'll learn key insights and practices to help you:

- Restore the broken connections caused by trauma
- Get embodied and grounded in your body
- Integrate the parts of yourself that feel wounded and fragmented
- Emerge from grief, fear, and powerlessness to regain strength, joy, and resiliency
- Reclaim access to your inner resources and spiritual nature

“We are fundamentally designed to heal,” teaches Dr. Heller. “Even if our childhood is less than ideal, our secure attachment system is biologically programmed in us, and our job is to simply find out what's interfering with it—and learn what we can do to make those secure tendencies more dominant.” With expertise drawn from Dr. Heller's research, clinical work, and training programs, this book invites you to begin that journey back to wholeness.

Unraveling trauma in the body, brain and mind—a revolution in treatment. Now in 16 languages. In this culmination of his life's work, Peter A. Levine draws on his broad experience as a clinician, a student of comparative brain research, a stress scientist and a keen observer of the naturalistic animal world to explain the nature and transformation of trauma in the body, brain and psyche. In *An Unspoken Voice* is based on the idea that trauma is neither a disease nor a disorder, but rather an injury caused by fright, helplessness and loss that can be healed by engaging our innate capacity to self-regulate high states of arousal and intense emotions. Enriched with a coherent theoretical framework and compelling case examples, the book elegantly blends the latest findings in biology, neuroscience and body-oriented psychotherapy to show that when we bring together animal instinct and reason, we can become more whole human beings.

A neurologist's view of our response to trauma.

Whether you're new to somatic approaches or a seasoned practitioner, this toolbox will be a game-changer in your work. From over 25 years of clinical experience, Manuela Mischke-Reeds, MA, LMFT, has created the go-to resource for mental health therapists who want to incorporate somatic techniques into their daily practice. Highly-effective for clients dealing with trauma and stress disorders, somatic psychotherapy is the future of healing the entire person-body and mind. Section-by-section, this toolbox guide the clinician through:

- Targeted somatic interventions for trauma, stress and PTSD
- Steps to incorporate the body into your current therapeutic approach
- Mindfulness techniques and breath work
- Starting guidelines, safety concerns and keys to success
- Getting to know their own body to better use body work with clients

This handbook guides yoga teachers and trainees in how to approach teaching students with common injuries and health conditions safely, confidently, and in a manner that empowers students. Dr Andrew McGonigle combines his medical background with extensive knowledge of yoga to address common injuries in detail with an in-depth review of anatomy. The book describes the psychology of pain and injury with reference to the latest research on pain and biomechanics. It also provides advice and tips on how to modify yoga techniques to suit the needs of students with injuries. Detailed illustrations throughout the book provide a visual guide to support understanding. This book is part of the series 'Yoga Teaching Guides', which provides expert information on essential topics as well as ideas for creative teaching.

“This groundbreaking book offers a compelling understanding of inherited trauma and fresh, powerful tools for relieving its suffering. Mark Wolynn is a wise and trustworthy guide

on the journey toward healing.” —Tara Brach, PhD, author of Radical Acceptance and True Refuge A groundbreaking approach to transforming traumatic legacies passed down in families over generations, by an acclaimed expert in the field Depression. Anxiety. Chronic Pain. Phobias. Obsessive thoughts. The evidence is compelling: the roots of these difficulties may not reside in our immediate life experience or in chemical imbalances in our brains—but in the lives of our parents, grandparents, and even great-grandparents. The latest scientific research, now making headlines, supports what many have long intuited—that traumatic experience can be passed down through generations. It Didn't Start with You builds on the work of leading experts in post-traumatic stress, including Mount Sinai School of Medicine neuroscientist Rachel Yehuda and psychiatrist Bessel van der Kolk, author of The Body Keeps the Score. Even if the person who suffered the original trauma has died, or the story has been forgotten or silenced, memory and feelings can live on. These emotional legacies are often hidden, encoded in everything from gene expression to everyday language, and they play a far greater role in our emotional and physical health than has ever before been understood. As a pioneer in the field of inherited family trauma, Mark Wolynn has worked with individuals and groups on a therapeutic level for over twenty years. It Didn't Start with You offers a pragmatic and prescriptive guide to his method, the Core Language Approach. Diagnostic self-inventories provide a way to uncover the fears and anxieties conveyed through everyday words, behaviors, and physical symptoms. Techniques for developing a genogram or extended family tree create a map of experiences going back through the generations. And visualization, active imagination, and direct dialogue create pathways to reconnection, integration, and reclaiming life and health. It Didn't Start With You is a transformative approach to resolving longstanding difficulties that in many cases, traditional therapy, drugs, or other interventions have not had the capacity to touch.

If you are suffering chronic pain—even after years of surgery, rehabilitation, and medication—only one question matters: How do I find lasting relief? With Freedom from Pain, two pioneers in the field of pain and trauma recovery address a crucial missing factor essential to long-term healing: addressing the unresolved emotional trauma held within the body. Informed by their founding work in the Somatic Experiencing® process and unique insights gleaned from decades of clinical success, Drs. Levine and Phillips will show you how to: Calm the body's overreactive “fight” response to pain Release the fear, frustration, and depression intensified by prior traumas, and build inner resilience and self-regulation Relieve pain caused by the aftermath of injuries, surgical procedures, joint and muscle conditions, migraines, and other challenges Whether you're seeking to begin a self-care strategy or amplify your current treatment program, Freedom from Pain will provide you with proven tools to help you experience long-term relief.

Stress, crisis and trauma can be dis-empowering. You can let go of the past and take your power back.

Promises to help readers reach their full potential through yoga, meditation and mindful breathing, in a book that includes exercises, anecdotes and analogies. Original.

Now in 15 languages. Understand the different types of upsets and traumas your child may experience—and learn how to teach them how to be resilient, confident, and even joyful. The number of anxious, depressed, hyperactive and withdrawn children is staggering—and still growing! Millions have experienced bullying, violence (real or in the media), abuse or sexual molestation. Many other kids have been traumatized from more “ordinary” ordeals such as terrifying medical procedures, accidents, loss and divorce. Trauma-Proofing Your Kids sends a lifeline to parents who wonder how they can help their worried and troubled children now. It offers simple but powerful tools to keep children safe from danger and to help them “bounce back” after feeling scared and overwhelmed. No longer will kids have to be passive prey to predators or the innocent victims of life's circumstances. In addition to arming parents with priceless protective strategies, best-selling authors Dr. Peter A. Levine and Maggie Kline offer an antidote to trauma and a recipe for creating resilient kids no matter what misfortune has besieged them. Trauma-Proofing Your Kids is a treasure trove of simple-to-follow “stress-busting,” boundary-setting, sensory/motor-awareness activities that counteract trauma's effect on a child's body, mind and spirit. Including a chapter on how to navigate the inevitable difficulties that arise during the various ages and stages of development, this ground-breaking book simplifies an often mystifying and complex subject, empowering parents to raise truly confident and joyful kids despite stressful and turbulent times.

Born out of the excitement of a convergence of ideas and passions, this book provides a synthesis of the work of researchers, clinicians, and theoreticians who are leaders in the field of trauma, attachment, and psychotherapy. As we move into the third millennium, the field of mental health is in an exciting position to bring together diverse ideas from a range of disciplines that illuminate our understanding of human experience: neurobiology, developmental psychology, traumatology, and systems theory. The contributors emphasize the ways in which the social environment, including relationships of childhood, adulthood, and the treatment milieu change aspects of the structure of the brain and ultimately alter the mind.

Traumatic events can leave mental and physical scars-but these scars don't have to define us. Heal the Body, Heal the Mind takes trauma survivors on a supportive and healing journey toward well-being. By practicing the somatic exercises and mind-body interventions in this compassionate guide, readers will learn to move past difficult experiences, restore their relationships, and cultivate spiritual awareness.

In this exciting sequel to Found, Jonah, Katherine, Alex and Chip are convinced by JB that they must travel back in time to 1483 to fix history by preventing a murderous plot against the young princes in order for disaster to be averted in the present day.

Describes an effective technique for identifying one's personal problems by developing an awareness of one's innermost feelings and thus altering behavior and solving problems on a step-by-step basis. Reissue.

An essential guide for recognizing, preventing, and healing childhood trauma, from infancy through adolescence—what parents, educators, and health professionals can do. Trauma can result not only from catastrophic events such as abuse, violence, or loss of loved ones, but from natural disasters and everyday incidents such as auto accidents, medical procedures, divorce, or even falling off a bicycle. At the core of this book is the understanding of how trauma is imprinted on the body, brain, and spirit, resulting in anxiety, nightmares, depression, physical illnesses, addictions, hyperactivity, and aggression. Rich with case studies and hands-on activities, *Trauma Through a Child's Eyes* gives insight into children's innate ability to rebound with the appropriate support, and provides their caregivers with tools to overcome and prevent trauma.

Waking the Tiger: Healing Trauma The Innate Capacity to Transform Overwhelming Experiences North Atlantic Books

Billions of dollars are spent on stroke-related rehabilitation research and treatment techniques but most are not well communicated to the patient or caregiver. As a result, many stroke survivors are treated with outdated or ineffective therapies. *Stronger After Stroke* puts the power of recovery in the reader's hands by providing simple to follow instructions for reaching the highest possible level of healing. Written for stroke survivors, their caregivers, and loved ones, *Stronger After Stroke* presents a new and more effective treatment philosophy that is startling in its simplicity: stroke survivors recover by using the same learning techniques that anyone uses to master anything. Basic concepts are covered, including: Repetition of task-specific movements Proper scheduling of practice Challenges at each stage of recovery Setting goals and recognizing when they have been achieved The book covers the basic techniques that can catapult stroke survivors toward maximum recovery. *Stronger After Stroke* bridges the gap between stroke survivors and what they desperately need: easily understandable and scientifically accurate information on how to achieve optimal rehabilitation.

For survivors of PTSD and repeated, relational trauma -- and the people who love them. Gretchen Schmelzer watched too many people quit during treatment for trauma recovery. They found it too difficult or too frightening or just decided that for them it was too late. But as a therapist and trauma survivor herself, Dr. Schmelzer wants us to know that it is never too late to heal from trauma, whether it is the suffering caused within an abusive relationship or PTSD resulting from combat. Sometimes what feels like a big setback is actually an unexpected difficult step forward. So she wrote *Journey Through Trauma* specifically for survivors--to help them understand the terrain of the healing process and stay on the path. There are three basic principles that every trauma survivor should know: Healing is possible. It requires courage. And it cannot be done alone. Traumas that happen more than once--child abuse, sexual abuse, domestic violence, gang violence, even war--are all relational traumas. They happened inside a relationship and therefore must be healed inside a relationship, whether that relationship is with a therapist or within a group. *Journey Through Trauma* gives us a map to help guide us through that healing process, see where the hard parts show up, and persevere in the process of getting well. We learn the five phases that every survivor must negotiate along the way and come to understand that since the cycle of healing is not linear, circling back around to a previous stage does not mean defeat - it actually means progress as well as facing new challenges. Authoritative and accessible, *Journey Through Trauma* provides support for survivors and their loved ones through one of the most challenging but necessary processes of healing that anyone can face.

This is a revised edition.

An expert on traumatic stress outlines an approach to healing, explaining how traumatic stress affects brain processes and how to use innovative treatments to reactivate the mind's abilities to trust, engage others, and experience pleasure--

These essays bring together disciplinary understandings of what it is to be the bodies we are. In its own way, each essay calls into question certain culturally-embedded ways of valuing the body which deride or ignore its role in making us human. These ways have remained virtually unchanged since Descartes in the seventeenth century first sharply divided mind--a thinking substance, from the body--an extended substance. The legacy of this Cartesian metaphysics has been to reduce the body by turns to a static assemblage of parts and to a dumb show of movement. It has both divided the fundamental integrity of creaturely life and depreciated the role of the living body in knowing and making sense of the world, in learning, in the creative arts, and in self- and interpersonal understandings. The living sense of the body and its capacity for sense-making have indeed been blotted out by top-heavy concerns with brains, minds, and language, as if these existed without a body. It is this conception of the body as mere handmaiden to the privileged that the contributors to this book challenge. By the evidence they bring forward, they help restore what is properly due the body since Descartes convinced us that mind and body are separate, and that mind is the primary value. Moreover, they help to elucidate what is properly due the body since the more recent twentieth-century western emphasis upon vision effectively reduced the richness of the affective and tactile-kinesthetic body--the body of felt experience--to a simple sum of sensations. Dominant themes that run throughout the essays and that call our attention to the living sense of the body and its capacity for sense-making are: wholeness, the capacity for self-healing, cultural histories of the body, pan-cultural bodily invariants, thinking, emotions, and the body's wisdom. In the end, these themes show that giving the body its due means forging a metaphysics that upholds the truths of experience.

In one way or another, we all carry trauma. It can manifest as anxiety, shame, low self-esteem, over-eating, under-eating, addiction, depression, confusion, people-pleasing, under-earning, low mood, negative thinking, social anxiety, anger, brain fog and more. Traumas, big or 'little', leave us trapped in cycles of dysfunctional behaviours, negative thoughts and difficult feelings. Yet many people are unaware they're stuck in old reactions and patterns that stem from their past traumas. Many of us are wary of the word and push it away instead of moving towards it and learning how to break free. Dr Sarah Woodhouse is a Research Psychologist who specialises in trauma and is passionate about

helping people face this word and their past. In *You're Not Broken* she teaches you what a trauma is (it's probably not what you think), and how to recognise when, why and how your past is holding you back. She gently explains the pitfalls of ignoring awkward, upsetting episodes and how true freedom comes from looking back at your past with honesty. Then, sharing the latest research-based techniques and her own personal experience, she guides you towards breaking the trauma loop, reawakening your true self and reclaiming your future.

A practical, integrated approach for therapists working with child and adult patients impacted by developmental trauma and attachment difficulties Kathy L. Kain and Stephen J. Terrell draw on fifty years of their combined clinical and teaching experience to provide this clear road map for understanding the complexities of early trauma and its related symptoms. Experts in the physiology of trauma, the authors present an introduction to their innovative somatic approach that has evolved to help thousands improve their lives. Synthesizing across disciplines—Attachment, Polyvagal, Neuroscience, Child Development Theory, Trauma, and Somatics—this book provides a new lens through which to understand safety and regulation. It includes the survey used in the groundbreaking ACE Study, which discovered a clear connection between early childhood trauma and chronic health problems. For therapists working with both adults, children, and anyone dealing with symptoms that typically arise from early childhood trauma—anxiety, behavioral issues, depression, metabolic disorders, migraine, sleep problems, and more—this book offers hope for a happier, trauma-free life.

****Unraveling Trauma in the Body, Brain and Mind—a Revolution in Treatment**** In this culmination of his life's work, Peter A. Levine draws on his broad experience as a clinician, a student of comparative brain research, a stress scientist and a keen observer of the naturalistic animal world to explain the nature and transformation of trauma in the body, brain and psyche. In an *Unspoken Voice* is based on the idea that trauma is neither a disease nor a disorder, but rather an injury caused by fright, helplessness and loss that can be healed by engaging our innate capacity to self-regulate high states of arousal and intense emotions. Enriched with a coherent theoretical framework and compelling case examples, the book elegantly blends the latest findings in biology, neuroscience and body-oriented psychotherapy to show that when we bring together animal instinct and reason, we can become more whole human beings.

Those who have had a narcissistic parent can testify to how damaging it can be to one's psyche. Narcissistic parents lack empathy, show a severe sense of entitlement to micromanage the lives of their children and often subject their children to neglect, as well as emotional, psychological and physical abuse. From the unique challenges daughters of narcissistic fathers face to the ways in which adverse childhood experiences affect our brains, Shahida Arabi's insightful essays resonate deeply with those who have been raised by narcissistic parents. In this new essay collection, Arabi explores how narcissistic abuse in childhood can set us up for trauma repetition in adulthood, affecting how we navigate relationships, the self, and the world. She pinpoints the toxic traits and behaviors of narcissistic mothers and fathers, exposing how covert abuse insidiously plays out in these specific dynamics. She offers the essential tools, skill sets and healing modalities for survivors who have undergone a lifetime's worth of abuse, helping them to break the cycle once and for all for future generations.

Researchers have shown that survivors of accidents, disaster, and childhood trauma often endure lifelong symptoms ranging from anxiety and depression to unexplained physical pain, fatigue, illness, and harmful "acting out" behaviors. Today, professionals and clients in both the bodywork and the psychotherapeutic fields nationwide are turning to Peter A. Levine's breakthrough Somatic Experiencing® methods to actively overcome these challenges. In *Healing Trauma*, Dr. Levine gives you the personal how-to guide for using the theory he first introduced in his highly acclaimed work *Waking the Tiger*. Join him to discover: how to develop body awareness to "renegotiate" and heal traumas by "revisiting" them rather than reliving them; emergency "first-aid" measures for times of distress; and nature's lessons for uncovering the physiological roots of your emotions." Trauma is a fact of life," teaches Peter Levine, "but it doesn't have to be a life sentence." Now, with one fully integrated self-healing tool, he shares his essential methods to address unexplained symptoms of trauma at their source—the body—to return us to the natural state in which we are meant to live in. Contents Introduction: A Tiger Shows the Way Chapter One: What is Trauma? Chapter Two: The Causes and Symptoms of Trauma Chapter Three: How Trauma Affects the Body Chapter Four: Twelve-Phase Healing Trauma Program: A Guide to the Audio Exercises Chapter Five: Sexual Trauma: Sexual Trauma: Healing the Sacred Wound Chapter Six: Spirituality and Trauma: Pathway to Awakening Helpful Tips and Techniques for Preventing Trauma Additional Resources About the Author About Sounds True Excerpt Trauma is the most avoided, ignored, denied, misunderstood, and untreated cause of human suffering. When I use the word trauma, I am talking here about the often debilitating symptoms that many people suffer from in the aftermath of perceived life-threatening or overwhelming experiences. Recently, trauma has been used as a buzzword to replace everyday stress, as in, "I had a traumatic day at work." However, this use is completely misleading. While it is true that all traumatic events are stressful, all stressful events are not traumatic. Unique to Each Individual When it comes to trauma, no two people are exactly alike. What proves harmful over the long term to one person may be exhilarating to another. There are many factors involved in the wide range of response to threat. These responses depend upon genetic make-up, an individual's history of trauma, even his or her family dynamics. It is vital that we appreciate these differences. Simply knowing that certain kinds of early childhood experiences can severely diminish our ability to cope and be present in the world may elicit compassion and support rather than harsh judgment, both for ourselves and for others. Perhaps the most important thing I have learned about trauma is that people, especially children, can be overwhelmed by what we usually think of as common everyday events. Until recently, our understanding of trauma was limited to "shell-shocked" soldiers who have been devastated by war, victims of severe abuse or violence, and those who have suffered catastrophic accidents and injuries. This narrow view could not be further from the truth. The fact is that, over time, a series of seemingly minor mishaps can have a damaging effect on a person. Trauma does not have to stem from a major catastrophe. Some common triggering events include: • Automobile accidents (even fender benders) • Routine invasive medical procedures • Loss of loved ones • Natural disasters, such as earthquakes and hurricanes Even falling off a bicycle can be overwhelming to a child under certain circumstances. We will discuss those circumstances later. For now, I will simply say that almost all of us have experienced some form of trauma, either directly or indirectly. Why are we the way we are? For over a hundred years psychologists have been conducting scientific experiments to find out. The *Rough Guide to Psychology* starts with you, your mind and brain, broadens out to your friends and other relationships, then onto crowds, mobs and religion. There are also sections on real-life psychology, showing how the latest research is relevant to crime, schooling, sports, politics, shopping, and health. There are opportunities to test your own memory, intelligence, personality, and much more, as well as advice on everything from pick-

up lines to creativity. This book takes a fresh look at the classic cases and studies, from Phineas Gage to Milgram, and combines this with a cutting-edge round-up of the latest research. The last section deals with what happens when the mind falters, covering depression, anxiety, schizophrenia, as well as more unusual conditions. Care is taken throughout to ensure conclusions are tied to the latest high quality psychological science.

From trauma educator and somatic guide Kimberly Ann Johnson comes a cutting-edge guide for tapping into the wisdom and resilience of the body to rewire the nervous system, heal from trauma, and live fully. In an increasingly polarized world where trauma is often publicly renegotiated, our nervous systems are on high alert. From skyrocketing rates of depression and anxiety to physical illnesses such as autoimmune diseases and digestive disorders, many women today find themselves living out of alignment with their bodies. Kimberly Johnson is a somatic practitioner, birth doula, and postpartum educator who specializes in helping women recover from all forms of trauma. In her work, she's seen the same themes play out time and again. In a culture that prioritizes executive function and "mind over matter," many women are suffering from deeply unresolved pain that causes mental and physical stagnation and illness. In *Call of the Wild*, Johnson offers an eye-opening look at this epidemic as well as an informative view of the human nervous system and how it responds to difficult events. From the "small t" traumas of getting ghosted, experiencing a fall-out with a close friend, or swerving to avoid a car accident to the "capital T" traumas of sexual assault, an impending natural disaster, or a life-threatening illness—Johnson explains how the nervous system both protects us from immediate harm and creates reverberations that ripple through a lifetime. In this practical, empowering guide, Johnson shows readers how to metabolize these nervous system responses, allowing everyone to come home to their deepest, most intuitive and whole selves. Following her supportive advice, readers will learn how to move from wholeness, tapping into the innate wisdom of their senses, soothing frayed nerves and reconnecting with their "animal selves." While we cannot cure the painful cultural rifts inflicting our society, there is a path forward—through our bodies.

NATIONAL BESTSELLER In this accessible and groundbreaking book -- filled with the moving stories of real people -- medical doctor and bestselling author of *Scattered Minds*, Gabor Maté, shows that emotion and psychological stress play a powerful role in the onset of chronic illness. Western medicine achieves spectacular triumphs when dealing with acute conditions such as fractured bones or life-threatening infections. It is less successful against ailments not susceptible to the quick ministrations of scalpel, antibiotic or miracle drug. Trained to consider mind and body separately, physicians are often helpless in arresting the advance of most of the chronic diseases, such as breast cancer, rheumatoid arthritis, Crohn's disease, multiple sclerosis, fibromyalgia, and even Alzheimer's disease. Gabor Maté has found that in all of these chronic conditions, there is a common thread: people afflicted by these diseases have led lives of excessive stress, often invisible to the individuals themselves. From an early age, many of us develop a psychological coping style that keeps us out of touch with the signs of stress. So-called negative emotions, particularly anger, are suppressed. Dr. Maté writes with great conviction that knowledge of how stress and disease are connected is essential to prevent illness in the first place, or to facilitate healing. *When the Body Says No* is an impressive contribution to current research on the physiological connection between life's stresses and emotions and the body systems governing nerves, immune apparatus and hormones. With great compassion and erudition, Gabor Maté demystifies medical science and, as he did in *Scattered Minds*, invites us all to be our own health advocates. Excerpt from *When the Body Says No* "Only an intellectual luddite would deny the enormous benefits that have accrued to humankind from the scrupulous application of scientific methods. But not all aspects of illness can be reduced to facts verified by double-blind studies and by the strictest scientific techniques. We confine ourselves to a narrow realm indeed if we exclude from accepted knowledge the contributions of human experience and insight. . . . "In 1892 William Osler, one of the greatest physicians of all time, suspected rheumatoid arthritis to be a stress-related disorder. Today rheumatology all but ignores that wisdom, despite the supporting scientific evidence that has accumulated in the 110 years since Osler first published his text. That is where the narrow scientific approach has brought the practice of medicine. Elevating modern science to be the final arbiter of our sufferings, we have been too eager to discard the insights of previous ages."

In *Trauma and Memory*, bestselling author Dr. Peter Levine (creator of the Somatic Experiencing approach) tackles one of the most difficult and controversial questions of PTSD/trauma therapy: Can we trust our memories? While some argue that traumatic memories are unreliable and not useful, others insist that we absolutely must rely on memory to make sense of past experience. Building on his 45 years of successful treatment of trauma and utilizing case studies from his own practice, Dr. Levine suggests that there are elements of truth in both camps. While acknowledging that memory can be trusted, he argues that the only truly useful memories are those that might initially seem to be the least reliable: memories stored in the body and not necessarily accessible by our conscious mind. While much work has been done in the field of trauma studies to address "explicit" traumatic memories in the brain (such as intrusive thoughts or flashbacks), much less attention has been paid to how the body itself stores "implicit" memory, and how much of what we think of as "memory" actually comes to us through our (often unconsciously accessed) felt sense. By learning how to better understand this complex interplay of past and present, brain and body, we can adjust our relationship to past trauma and move into a more balanced, relaxed state of being. Written for trauma sufferers as well as mental health care practitioners, *Trauma and Memory* is a groundbreaking look at how memory is constructed and how influential memories are on our present state of being.

Lord Russell's factual account of Nazi war crimes during World War Two is a formidable indictment of the Nazi brutality and monstrous organisational ability that so terrorised occupied Europe and murdered at least twelve million civilians.

Mira Rothenberg pioneered both the clinical distinction and treatment protocol for autistic and severely disturbed children as separate from those for the mentally retarded. Winner of a Woman of the Year award from the New York City Chamber of Commerce and the National Organization for Mentally Ill Children, she eloquently recounts a lifetime of taking on seemingly hopeless cases and bringing these children, through painstaking therapy and love, back into the world. Unflinchingly honest, whether dealing with the raw pain of her patients' lives or with Rothenberg's own complex feelings for them, *Children with Emerald Eyes* explores the landscape of mental illness while never losing sight of the humanity within each patient.

In recent years, considerable research, as well as clinical guidelines based on study findings, has been published on the treatment of posttraumatic stress disorder (PTSD). A gap remains, however, between the controlled environments and protocols used in intervention research and the more complex and often imperfect settings and situations that clinicians must navigate in daily practice. Moreover, clinicians routinely see patients whose comorbid substance abuse, self-destructive behavior, or medical illness would likely exclude them from research studies. In short, although the extensive literature is certainly helpful in articulating the various treatment modalities available to clinicians, the strength of the evidence for the efficacy of the treatments, and the recommendations and personal preferences of experts, the literature does not address the real-life dilemmas that clinicians face in attempting to treat trauma survivors. What is needed is a way to bridge the gap between research and practice -- to "translate" study findings into everyday clinical realities. *Treating Trauma Survivors With PTSD* answers that need. Its authors, experienced researchers and clinicians who are at the forefront of conceptual discourse on trauma and PTSD, are uniquely qualified to offer guidance on these issues. Among the specific topics covered are the following: Diagnosis and assessment of and treatment planning for trauma survivors with PTSD, including clinical presentations related to trauma exposure and PTSD and the implications of comorbid symptoms and disorders Treatment matching in clinical practice -- how treatment outcome findings can be used to develop profiles for predicting which patients are most likely to respond to which treatments Medications useful in the treatment of PTSD and the strength of the empirical evidence for their efficacy Trauma in children and the efficacy of various treatments, including a discussion of how treatment for children differs from that for adults Assessment and treatment of multiply traumatized patients -- those with both recent trauma and a history of childhood trauma or abuse Treatment of trauma survivors in the acute aftermath of traumatic events, including a review of some of the exciting developments in the field regarding risk factors (e.g., normal vs. pathological coping responses) that influence which individuals are most likely to develop PTSD after such events. These topics have never been more relevant than now, in the wake of the attacks that shook our country on September 11, 2001. It is the authors' hope that by reading this book, mental health practitioners will gain more confidence in applying the specialized techniques described in empirical studies to their own practices and clinical realities.

Find lasting freedom from difficult emotions with skills grounded in cognitive behavioral therapy (CBT) and emotional schema therapy. If you struggle with difficult emotions, you should know that you aren't alone. Many people feel sad, worried, or stressed out—whether as a result of depression, anxiety, or simply dealing with the common struggles of daily life. Emotions are a natural and healthy part of being human. It's how we cope with these difficult emotions that reveal our true capacity for happiness, love, and joy. Don't Believe Everything You Feel offers a groundbreaking approach blending CBT and emotional schema therapy to help you explore your own deeply held personal beliefs about emotions, determine if these beliefs are helpful or harmful, and find the motivation to adopt alternative, healthier coping strategies. Each chapter contains exercises such as self-assessment, expressive writing, or guided questioning to help you manage your emotions more productively. There's no such thing as a "bad," emotion. But if you're experiencing sadness, anger, or anxiety most of the time, you need to find balance. This book will show you how to better cope with your emotions and live a full, meaningful life. The authenticity of memories of childhood sexual abuse has become one of the major social controversies of the 1990's. As persons who report histories of abuse have sought remedies in civil and criminal proceedings in the courts, the accuracy of their memories--particularly when they have been recalled after a period of time--has been subject to intense scrutiny. This volume brings together many of the leading participants in the debate to provide a comprehensive picture of the psychological, physiological, and legal aspects of trauma. Beginning by defining the opposing positions in the debate, the contributors then offer a variety of perspectives on the nature of memory, including reviews of some of the most exciting recent developments in this fast-growing area of investigation. Next, consideration is given to the impact of trauma on memory, both in adults and in children. With this framework in place, the authors turn to an examination of the variety of treatment approaches available to victims of trauma, who are trying to cope with the painful consequences of those events. The book argues against a unidimensional approach to trauma, calling instead for a multidisciplinary synthesis that includes developmental, neurobiological, cognitive, and psychodynamic perspectives. Chapters address the legal dilemmas for patients, mental health professionals and society as a whole that have arisen from the trauma and memory controversy. Most importantly, the editors shift the focus of their discussion from the laboratory to the courtroom and from the research journal to the psychotherapist's office, looking at the issues from every relevant angle. This is the only book in the field to treat the trauma and memory controversy comprehensively, from basic research on memory processes through clinical approaches to legal and policy issues. *Trauma and Memory* is a valuable tool for clinicians treating patients with traumatic memories. It is also intended for psychologists, physicians, social workers and lawyers who need a comprehensive reference on trauma and sexual abuse during childhood.

Never has it been so effortless to activate your inner power and resilience than with the remarkable technique known as "resource tapping." Tapping In makes available for the first time a self-guided program for learning this revolutionary EMDR-related method. With step-by-step instruction in bilateral stimulation (a core component of EMDR, or Eye Movement Desensitization and Reprocessing), Tapping In teaches you a clinically recognized system for tapping both sides of the body to overcome trauma, boost confidence, calm the body on a deep, physiological level, and to respond better to stress. Join world-renowned EMDR expert Dr. Laurel Parnell as she shares a series of easy-to-learn exercises to access your "latent positive resources"—your neurological foundation for internal resilience and stability.
